The Watts Bar Steam Plant Tennessee Valley Authority 1949 The Watts Bar Steam Plant is the first fuel-burning electric power plant constructed by the TVA. The first two of its four 60,000-kilowatt generating units were placed in commercial operation in February and March 1942 at a time when the products of industry and agriculture in the valley region were critical items in the war effort. These units increased the continuous energy capacity of the TVA system to approximately 830,000

kilowatts and the system peak to about 1,100,000 kilowatts. The further addition of Cherokee, Chatuge, and Nottely Dams and the down-river units raised the continuous energy of the system to 960,000 kilowatts and the peak capability to about 1,300,000 kilowatts by the fall of 1942. The third Watts Bar Steam Plant unit began operation in February 1943 and the fourth in April 1945 - important factors in keeping ahead of system demands.
