**Behind the Swap** Andrew DeJoy 2022-05-10 Andrew DeJoy's Behind the Swap examines the risks involved in post-trade processing in swaps and derivative markets, and provides solutions to better control those risks. While Andrew doesn't claim to have all the answers, he does believe there is a way to create a safer, stronger, and better financial system for all stakeholders. In August of 2020, Citibank made one of the worst mistakes in banking history: it accidentally sent out almost \$900 million of its own funds. Many of the recipients didn't give back the money. Citibank sued. And a federal court ruled that the recipients could keep the funds. Citibank's error is not surprising. The underlying contributors that led to the mistaken payment permeate the global financial services industry. Manual data entry, decades old technological infrastructure, inadequate training, and systems that can't interact with one another are just a few of the problems that face post-trade processing—the machinery behind financial markets. Unfortunately, years of neglect by regulators and financial institutions themselves has left this infrastructure needlessly complex, astoundingly inefficient, frequently inaccurate, and woefully inadequate for modern financial markets. Behind the Swap helps explain what's driving the recent series of banking blunders like Barclay's \$678 million clerical error, and Citibank's fat-finger Flash Crash that caused an 8% decline in the Swedish stock market. The book also touches on concepts that readily connect to Credit Suisse's \$5.5 billion loss on its trades with Archegos. The problems are easy to see but difficult to admit. For financial institutions, the current system costs billions of dollars each year in labor, systems maintenance, and lost funds. For regulators, the current system precludes the ability to track systemic risk. It also artificially inflates the stability of the global financial system. For lawyers and prosecutors, the current system allows ample opportunity for unlawful misconduct such as rogue trading and fraud.

*Hedge Fund Modelling and Analysis using MATLAB* Paul Darbyshire 2014-03-27 The second book in Darbyshire and Hampton's Hedge Fund Modelling and Analysis series, Hedge Fund Modelling and Analysis Using MATLAB® takes advantage of the huge library of built-in functions and suite of financial and analytic packages available to MATLAB®. This allows for a more detailed analysis of some of the more computationally intensive and advanced topics, such as hedge fund classification, performance measurement and mean-variance optimisation. Darbyshire and Hampton's first book in the series, Hedge Fund Modelling and Analysis Using Excel & and VBA, is seen as a valuable supplementary text to this book. Starting with an overview of the hedge fund industry the book then looks at a variety of commercially available hedge fund data sources. After covering key statistical techniques and methods, the book discusses mean-variance optimisation, hedge fund classification and performance with an emphasis on risk-adjusted return metrics. Finally, common hedge fund market risk management techniques, such as traditional Value-at-Risk methods, modified extensions and expected shortfall are covered. The book's

dedicated website, [www.darbyshirehampton.com](http://www.darbyshirehampton.com) provides free downloads of all the data and MATLAB® source code, as well as other useful resources. Hedge Fund Modelling and Analysis Using MATLAB® serves as a definitive introductory guide to hedge fund modelling and analysis and will provide investors, industry practitioners and students alike with a useful range of tools and techniques for analysing and estimating alpha and beta sources of return, performing manager ranking and market risk management.
