Development Discontinuities Tito Bianchi 1999 "The development literature considers associations an important economic development tool that allows producers to pursue their economic welfare collectively and through participatory means. This paper comparatively analyses the experience of three associations of agricultural producers in the underdeveloped regions of Brazil and Italy that were successful in this economic development task. Their experience, however, challenges a commonly held view about the participatory nature of associations."-- Abstract.

Capital, Interrupted Vinay K. Gidwani The central Gujarat region of western India is home to the entrepreneurial landowning Patel caste who have leveraged their rural dominance to become a powerful global diaspora of merchants, industrialists, and professionals. Investigating the Patels' intriguing ascent, Vinay Gidwani analyzes its broad implications for the nature of labor and capital worldwide. With the Patels as his central case, Gidwani interrogates established concepts of value, development, and the relationship between capital and history. Capitalism, he argues, is not a frame of economic organization based on the smooth, consistent operation of a series of laws, but rather an assemblage of contingent and interrupted logics stitched together into the appearance of a *deus ex machina*. Following this line of thinking, Gidwani points to ways in which political economy might be freed of its lingering Eurocentrism, raises questions about the adequacy of postcolonial studies' critique of Marx and capitalism, and opens the possibility of situating capitalism as a geographically uneven social formation in which different normative or value-creating practices are imperfectly sutured together in ways that can equally impair and enable profit and accumulation. Both theoretically astute and empirically informed, *Capital, Interrupted* unsettles encrusted understandings of staple concepts within the human sciences such as hegemony, governmentality, caste, and agency and, ultimately, does nothing less than rethink the very constitution of capitalism. Vinay Gidwani is associate professor of geography and global studies at the University of Minnesota.

Economics David A. Dieterle 2017-03-27 A comprehensive four-volume resource that explains more than 800 topics within the foundations of economics, macroeconomics, microeconomics, and global economics, all presented in an easy-to-read format. As the global economy becomes increasingly complex, interconnected, and therefore relevant to each individual, in every country, it becomes more important to be economically literate—to gain an understanding of how things work beyond the microcosm of the economic needs of a single individual or family unit. This expansive reference set serves to establish basic economic literacy of students and researchers, providing more than 800 objective and factually driven entries on all the major themes and topics in economics. Written by leading scholars and practitioners, the set provides readers with a framework for understanding economics as mentioned and debated in the public forum and media. Each of the volumes includes coverage of important events throughout economic history, biographies of the major economists who have shaped the world of economics, and highlights of the legislative acts that have shaped the U.S. economy throughout history. The extensive explanations of major economic concepts combined with selected key historical primary source documents and a glossary will endow readers with a fuller comprehension of our economic world.

Understanding Development Economics Adam Fforde 2014-01-03 Important parts of development practice, especially in key institutions such as the World Bank, are dominated by economists. In contrast, Development Studies is largely based upon multidisciplinary work in which anthropologists, human geographers, sociologists, and others play important roles. Hence, a tension has arisen between the claims made by Development Economics to be a scientific, measurable discipline prone to wide usage of mathematical modelling, and the more discursive, practice based approach favoured by Development Studies. The aim of this book is to show how the two disciplines have interacted, as well as how they differ. This is crucial in forming an understanding of development work, and to thinking about why policy recommendations can often lead to severe and continuing problems in developing countries. This book introduces Development Economics to those coming from two different but linked perspectives; economists and students of development who are not economists. In both explaining and critiquing Development Economics, the book is able to suggest the implications of these findings for Development Studies, and more broadly, for development policy and its outcomes.

Ending Global Poverty Stephen C. Smith 2015-03-17 Over 800 million people suffer from chronic hunger, and over ten million children die each year from preventable causes. These may seem like overwhelming statistics, but as Stephen Smith shows in this call to arms, global poverty is something that we can and should solve within our lifetimes. *Ending Global Poverty* explores the various traps that keep people mired in poverty, traps like poor nutrition, illiteracy, lack of access to health care, and others and presents eight keys to escaping these traps. Smith gives readers the tools they need to help people overcome poverty and to determine what approaches are most effective in fighting it. For example, celebrities in commercials who encourage viewers to "adopt" a poor child really seem to care, but will sending money to these organizations do the most good? Smith explains how to make an informed decision. Grass-roots programs and organizations are helping people gain the capabilities they need to escape from poverty and this book highlights many of the most promising of these strategies in some of the poorest countries in the world, explaining what they do and what makes them effective.

Development Economics Debraj Ray 1998-01-12 A landmark textbook on development economics The study of development in low-income countries is attracting more attention around the world than ever before. Yet until now there has been no comprehensive text that incorporates the recent huge strides made in the subject. *Development Economics* does precisely that in a clear, rigorous, and elegant fashion. Debraj Ray, one of the most accomplished theorists in development economics today, presents in this book a synthesis of recent and older literature in the field and raises important questions that will help to set the agenda for future research. He covers such vital subjects as theories of economic growth, economic inequality, poverty and undernutrition, population growth, trade policy, and the markets for land, labor, and credit. A common point of view underlies the treatment of these subjects: that much of the development process can be understood by studying factors that impede the efficient and equitable functioning of markets. Diverse topics such as the new growth theory, moral hazard in land contracts, information-based theories of credit markets, and the macroeconomic implications of economic inequality come under this common methodological umbrella. The book takes the position that there is no single cause for economic progress, but that a combination of factors—among them the improvement of physical and human capital, the reduction of inequality, and institutions that enable the background flow of information essential to market performance—consistently favor development. Ray supports his arguments throughout with examples from around the world. The

book assumes a knowledge of only introductory economics and explains sophisticated concepts in simple, direct language, keeping the use of mathematics to a minimum. Development Economics will be the definitive textbook in this subject for years to come. It will prove useful to researchers by showing intriguing connections among a wide variety of subjects that are rarely discussed together in the same book. And it will be an important resource for policy-makers, who increasingly find themselves dealing with complex issues of growth, inequality, poverty, and social welfare.

Fairness and Division of Labor in Market Societies Hyeong-Ki Kwon 2004-10-01 Contrary to the explanations offered by the theory of non-reflexive, path-dependent institutionalism, the U.S. and the German automotive industries undertook strikingly similar patterns of industry modification under tough international competition during the 1990s, departing from their traditional national patterns. By investigating the processes of the U.S. and German adjustments, the author critically reconsiders the prevalent paradigms of political economy and comes to the conclusion that the evidence does not confirm the neoliberal paradigm. In order to better account for the recomposition of new market relations, which the author terms "converging but non-liberal" and "diverging but not predetermined" markets, he proposes an alternative model of "politics among reflexive agents," emphasizing different kinds of problem-solving practices among those reflexive agents. He argues that different forms and regimes of market are established in the process of recomposition, in which agents reflect upon not only market rationality but also upon their own institutions, creating new norms.

The Economic Theory of Agrarian Institutions Pranab Bardhan

1989-07-27 This volume breaks new ground in the economic theory of institutions. The contributors show how some of the tools of advanced economic theory can usefully contribute to an understanding of how institutions operate. They show how sound theoretical analysis can in fact enable economists to reach conclusions which will help practitioners avoid many pitfalls in the formation and implementation of development policies, both within individual countries and in the context of international aid.
