Draw Islamic Geometric Star Patterns Eric Broug 2014-10-07 Learn how to draw seven geometric star patterns from around the Islamic world, using only a pencil, straight edge, and a pair of compasses. Patterns featured are from Baghdad, Fes, Cairo, Konya, Delhi and Damascus. Suitable for ages 9 and up. No calculations are necessary. The least complicated way of learning Islamic geometric design is to understand and use the same techniques that craftsmen in the Islamic world have used for centuries. These craftsmen were not mathematicians; they knew how to make things with their hands but they did not use measurements or calculate angles to make their compositions. Their tools were a pair of compasses, a ruler and a pencil. By drawing

lines, circles and arcs they were able to make all their patterns and compositions. This is also how you will be able to draw these patterns. This book will teach you how to draw seven different star patterns. All the patterns in this book can be made without calculations and measurements. They can be made by hand or on a computer. All you need to be able to do is draw circles and lines. The tools you need if you are drawing by hand are a pair of compasses, a ruler and pencils. Each pattern is constructed in a step-by-step process.

Practical Geometric Pattern Design Mirosław Majewski 2020-02-10 This book is third in a series of textbooks on geometric pattern design used at the Istanbul Design Center. It is intended as a tutorial book for 30 hours basic course on geometric patterns in Islamic arts. The content of this book covers some major areas of geometric pattern design. In chapter 2 we discuss how one can approach a complex geometric pattern. It is the most important part in understanding the general structure of any pattern. In chapter 3 we discuss and experiment with patterns built on triangular grids and square grids. This is the simplest group of geometric patterns and usually neglected. In

chapters 4 and 5 we deal with 6 and 12 fold patterns. These are the patterns with local symmetries D_6 and D_{12} . Usually, we refer to them as hexagonal and dodecagonal patterns. In chapters 6 and 7 we discuss octagonal patterns. Here we also briefly discuss differences between eastern (Central Asia and India) and western octagonal patterns (Morocco and Spain). Finally, in chapter 8 we discuss briefly decagonal patterns, i.e. patterns with D_{10} local symmetries. More about decagonal patterns readers can find in two other books published by Istanbul Design Publishing in 2019.

Islamic Geometric Patterns Eric Broug 2008 Geometric patterns are perhaps the most recognizable visual expressions of Islamic art and architecture, magnificent in their beauty and awe-inspiring in their execution. Now, with the aid of this book, anyone can learn how to master this ancient art and create intricate patterns or re-create classic examples. An introduction guides the reader through the

basics, and is followed by some of the best examples of geometric patterns from around the world, arranged into three levels of complexity, with careful, step-by-step instructions taking the reader through the stages of composition. The book also includes a CD-ROM, allowing you to experiment with Islamic geometric patterns on the computer.

Symmetries of Islamic Geometrical Patterns

S. J. Abas 1995 ... a major contribution to the world of science and of particular value to the documentation of the culture of Islam. N Gedal ... a masterly account of the way in which art and science are combined into aesthetic beauty by the Islamic geometric designs and motifs which decorate much of the Eastern World. M Evans ...

This book will allow readers to travel through time and space, from ancient ornaments to the most modern computer graphics patterns. C. Pickover Ever since the discovery of the existence of seventeen space groups in two dimensions by Fedorov in 1891, it has been speculated that all seventeen could be found in Islamic art. But it is in this book that this remarkable fact is for the first time detailed and analysed, with beautiful illustrations. Rarely is there such a thought-provoking blend of esthetics and geometry with abstraction. C N Yang Geometrical form. Here, mathematics combines with art and exhibits clearly its aesthetic appeal Islamic patterns provide a marvellous illustration of symmetry and Drs. Abas and Salman perform a useful service by taking this as their theme and blending it with ideas on computer graphics. Foreword by Michael Atiyah Abas and Salman have assembled a fascinating collection that combines art, history, culture, science, mathematics and

philosophy. Their examples range from a 12th-century minaret in Uzbekistan via the Alhambra in Granada to modern computer graphics of Koranic calligraphy on dodecahedrons and tori. They conclude by speculating on the prospect of creating Islamic patterns in virtual reality, where 'a seeker after unity in science and art would be able to submerge himself or herself in exquisite Alhambras of the mind'. Judging by the evidence presented here, it would be an unforgettable experience. New Scien

Islamic Art and Architecture Issam El-Said 1993
Issam El-Said pinpoints the rules of composition that form the basis of the geometric concepts of Islamic art. He then shows how intricate patterns are based on these basic principles. Fully illustrated in three colors to show the

development of the patterns, this book offers an insight into how craftsmen and designers in the Muslim world achieved monumental feats of artistic expression using the simplest of tools. Chapter I presents graphical analyses of numerous complex patterns, to reveal the numerical rationale behind them. In Chapter II, the author analyses the system of measure used in ancient Egypt, before the use of numbers for calculating measurements. He shows how measuring cords and a geometric method based on a grid-pattern originating from the circle were employed by master craftsmen in the design of Islamic art and architecture. The book offers an insight into how craftsmen and designers in the Muslim world have achieved monumental feats of artistic expression with harmony and precision, using the simplest of tools such as a ruler, a string and templates, together with a system of measure that is both simple and sophisticated.

Islamic Geometric Patterns Jay Bonner

2017-08-17 The main focus of this unique book is an in-depth examination of the polygonal technique; the primary method used by master artists of the past in creating Islamic geometric patterns. The author details the design methodology responsible for this all-but-lost art form and presents evidence for its use from the historical record, both of which are vital contributions to the understanding of this ornamental tradition. Additionally, the author examines the historical development of Islamic geometric patterns, the significance of geometric design within the broader context of Islamic ornament as a whole, the formative role that geometry plays throughout the Islamic ornamental arts (including calligraphy, the floral idiom, dome decoration, geometric patterns, and more), and the underexamined question of pattern classification. Featuring over 600 beautiful color images, *Islamic Geometric Patterns: Their Historical Development and Traditional Methods of Construction* is a

valuable addition to the literature of Islamic art, architecture and geometric patterns. This book is ideal for students and scholars of geometry, the history of mathematics, and the history of Islamic art, architecture, and culture. In addition, artists, designers, craftspeople, and architects will all find this book an exceptionally informative and useful asset in their fields. Jay Bonner is an architectural ornamentalist and unaffiliated scholar of Islamic geometric design. He received his MDes from the Royal College of Art in London (1983). He has contributed ornamental designs for many international architectural projects, including the expansion of both the al-Masjid al-Haram (Grand Mosque) in Mecca, and the al-Masjid an Nawabi (Prophet's Mosque) in Medina, as well the Tomb of Sheikh Hujwiri in Lahore, and the Ismaili Centre in London - to name but a few. He is committed to the revitalization of Islamic geometric design through the teaching of traditional methodological practices. To this end, in

addition to publishing, Jay Bonner has lectured and taught design seminars at many universities and conferences in North America, Europe, North Africa and Asia.

Islamic Design: A Mathematical Approach Brian Wichmann 2018-05-02 This book deals with the genre of geometric design in the Islamic sphere. Part I presents an overview of Islamic history, its extraordinary spread from the Atlantic to the borders of China in its first century, its adoption of the cultural outlook of the older civilisations

that it conquered (in the Middle East, Persia and Central Asia), including their philosophical and scientific achievements - from which it came to express its own unique and highly distinctive artistic and architectural forms. Part II represents the mathematical analysis of Islamic geometric designs. The presentation offers unlimited precision that allows software to reconstruct the design vision of the original artist. This book will be of interest to Islamic academics, mathematicians as well as to artists & art students.

Islamic Design Workbook Eric Broug 2016-11-29

A fresh take on adult coloring books, featuring the intricate patterns of Islamic design Building on the concept of a traditional coloring book, the Islamic Design Workbook opens up the world of intricate Islamic patterns, allowing designers and doodlers alike to learn about these works of art as they produce their own. With forty-eight Islamic geometric compositions from around the

world to choose from, artists at all skill levels will relish the myriad opportunities to replicate these intricate patterns, or create their own. The workbook's clever design invites the pattern-maker to consider a composition in the book, take a corresponding loose leaf from the back of the book, and figure out which sections of lines to trace to make the composition. Readers will have the unique satisfaction of making patterns appear where previously none were visible. Compositions—including a mix of more familiar geometric compositions and those that have scarcely been documented—are categorized by region and have various levels of complexity, making it possible for beginners to get started and artists or designers to develop their skills. Compositions are sourced from Samarkand, Delhi, Fes, Isfahan, and Cairo, among many others.

Best Practice in Islamic Geometric Design

Eric Broug 2019-01-30 What can we learn from 1,400 years of design excellence? What rules

and conventions have guaranteed consistent quality for centuries across the Islamic world? Eric Broug looks at a wide range of visual evidence and codifies these rules: he reveals the design practices of traditional builders: how to scale a composition, how to create an engaging composition, how to innovate etc. This book shows how it was done, it shows how to apply best practice now, and it shows the most common problems in contemporary Islamic geometric design, and how to avoid them.
