Mathematics for Business Richard Bronson 2021-04-22 Mathematics For Business has been created by noted authors in the mathematics, programming, and finance fields to be an extremely affordable and useful text for a first course in business mathematics. The book develops just the mathematics today's business student needs prior to taking more advanced, second and third tier mathematical courses. Basic mathematical concepts and selected topics in finite mathematics are first presented. Then the mathematics of finance is presented, followed by rates of change, derivatives, and creating trendlines. Spreadsheets are used where they are most useful in such areas as amortization tables and trend lines. The organization, presentation, and examples have been carefully tailored to be maximally useful to the intended audience.

Math for Business and Finance Jeffrey Slater 2023 "For the first four chapters, blueprint aid boxes are available to help you map out a plan to solve a word problem. We know the harder thing to do in solving word problems is often figuring out where to start. Use the blueprint as a model to get started. At the end of each chapter is a quick reference guide called the Interactive Chapter Organizer, in which key points, formulas, and examples are provided. A list of vocabulary terms is also included, as well as Check Figures for Extra Practice Quizzes. A column called "You Try It" gives you a chance to do additional practice. And solutions are provided in Appendix B. (A complete glossary is found at the end of the text.) Think of the Interactive Chapter Organizer as your set of notes and use it as a reference when doing homework problems and reviewing before exams"--
