Research and Practice of Active Learning in Engineering

Education Erik de Graaff 2005 Since 2001, the international network Active Learning in Engineering education (ALE) organized a series of international workshops on innovation of engineering education. The papers in this book are selected to reflect the state of the art, based on contributions to the 2005 ALE workshop in Holland. This overview of experiences in research and practice aims to be a source of inspiration for engineering educators.

Mechanical Engineering is defined nowadays as a discipline “which involves the application of principles of physics, design, manufacturing and maintenance of mechanical systems”. Recently, mechanical engineering has also focused on some cutting-edge subjects such as nanomechanics and nanotechnology, mechatronics and robotics, computational mechanics, biomechanics, alternative energies, as well as aspects related to sustainable mechanical engineering. This book covers mechanical engineering higher education with a particular emphasis on quality assurance and the improvement of academic institutions, mechatronics education and the transfer of knowledge between university and industry.

Trends in Teaching and Learning of Mathematical Modelling Gabriele Kaiser 2011-06-23 This book contains suggestions for and reflections on the teaching, learning and assessing of mathematical modelling and applications in a rapidly changing world, including teaching and learning environments. It addresses all levels of education from universities and technical colleges to secondary and primary schools. Sponsored by the International Community of Teachers of Mathematical Modelling and Applications (ICTMA), it reflects recent ideas and methods contributed by specialists from 30 countries in Africa, the Americas, Asia, Australia and Europe. Inspired by contributions to the Fourteenth Conference on the Teaching of Mathematical Modelling and Applications (ICTMA14) in Hamburg, 2009, the book describes the latest trends in the teaching and learning of mathematical modelling at school and university including teacher education. The broad and versatile range of topics will stress the international state-of-the-art on the following issues: Theoretical reflections on the teaching and learning of modelling Modelling competencies Cognitive perspectives on modelling Modelling examples for all educational levels Practice of modelling in school and at university level Practices in Engineering and Applications

Integrated Design and Manufacturing in Mechanical Engineering

'98 Jean-Louis Batoz 1999-11-30 This book is devoted to the optimization of product design and manufacturing. It contains selected and carefully composed articles based on presentations given at the IDMME conference, held in Compiègne University of Technology, France, in 1998. The authors are all involved in cutting-edge research in their respective fields of specialization. The integration of manufacturing constraints and their optimization in the design process is becoming more and more widespread in the development of mechanical products or systems. There is a clear industrial need for these kinds of methodologies. Important - but still unsolved - problems are related to the definition of design processes, the choice of optimal manufacturing processes, and their integration through coherent methodologies in adapted environments. The main topics addressed in this book are: analysis and optimization of mechanical parts and products (computational structural mechanics, optimum design of structures, finite element solvers, computer-aided geometry, modeling and synthesis of mechanisms); analysis and optimization for fabrication and manufacturing systems (modeling of forming processes, modeling for control and measurement, tolerancing and assembly in manufacturing, off-line programming and optimal parameters for machining, robotics, welding); methodological aspects of integrated design and manufacturing (new methodologies for design with constraints, communication tools, training applications, computer-aided manufacturing). Apart from giving a thorough theoretical background, a very important theme is the relation between research and industrial applications. The book is of interest for engineers, researchers and PhD students who are involved in the optimization of design and manufacturing processes.

Digital VLSI Systems Design Seetharaman Ramachandran 2007-06-14 This book deals with actual design applications rather than the technology of VLSI Systems. This book is written basically for an advanced level course in Digital VLSI Systems Design using a Hardware

Design Language (HDL), V-ilog. This book may be used for teaching undergraduates, graduates, and research scholars of Electrical, Electronics, Computer Science and Engineering, Embedded Systems, Measurements and Instrumentation, Applied Electronics, and interdisciplinary departments such as Biomedical, Mechanical Engineering, Information Technology, Physics, etc. This book also serves as a reference design manual for practicing engineers and researchers. Although this book is written for an advanced level course, diligent freelance readers, and consultants, especially, those who do not have a first level exposure of digital logic design, may also start using this book after a short term course or self-study on digital logic design. In order to help these readers as well as regular students, the book starts with a good review of digital systems design, which lays a solid foundation to understand the rest of this book right up to involved Project Designs unfolded gradually. Contents of the Book The book presents new source material and theory as well as synthesis of recent work with complete Project Designs using industry standard CAD tools and FPGA boards, enabling the serious readers to design VLSI Systems on their own.

Writing Assignments Across University Disciplines Roger Graves 2017-12-07 Writing Assignments Across the University Curriculum as a whole asks and answers these questions: What kinds of documents do students write in a wide range of university degree programs in Canada? How do instructors structure those writing assignments? That is, who is the audience for the assignments? Do students get formative feedback as they develop their documents? Do the patterns we found in a small liberal arts college (Graves, Hyland, and Samuels 2010) occur in other kinds of universities? We took our cue from an article by Anson and Dannels (2009) who pointed us toward the idea that students experience a curriculum through their degree progress in an academic program. Consequently, we needed to map the writing assignments according to how different departments organized these degree programs. Results that were organized by curricular unit (departments, faculties or colleges, or programs/units) were more significant than general statistics

because students would progress through these courses to a degree. Several chapters in the book describe how this kind of curricular mapping provided a spark for curricular reform in Engineering, Education, and an entire small university. The last two chapters report on the instructors perspective on their assignments: what they were intending to do, and why they both resisted and engaged in curricular discussions.
