Pre-failure Deformation Characteristics of Geomaterials

Jamiolkowski 2001 The second of two volumes from the 1999 conference (v.1 was published in 1999) makes available the opening lecture on pre-failure behavior of soils as construction materials, as well as 24 contributions on various themes of the conference, laboratory tests, in situ tests, stress-strain behavior, applications and case histories. Some specific topics include time-dependent deformation characteristics of stiff geomaterials, boundary value problems in geotechnical engineering, and the effect of reinforcement due to choice of geogrid. Artificial Intelligence Enabled Computational Methods for Smart

Grid Forecast and Dispatch Yuanzheng Li 2023-05-05 With the increasing penetration of renewable energy and distributed energy resources, smart grid is facing great challenges, which could be divided into two categories. On the one hand, the endogenous uncertainties of renewable energy and electricity load lead to great difficulties in smart grid forecast. On the other hand, massive electric devices as well as their complex constraint relationships bring about significant difficulties in smart grid dispatch. Owe to the rapid development of artificial intelligence in recent years, several artificial intelligence enabled computational methods have been successfully applied in the smart grid and achieved good performances. Therefore, this book is concerned with the research on the key issues of artificial intelligence enabled computational methods for smart grid forecast and dispatch, which consist of three main parts. (1) Introduction for smart grid forecast and dispatch, in inclusion of reviewing previous contribution of various research methods as well as their drawbacks to analyze characteristics of smart grid forecast and dispatch. (2) Artificial intelligence enabled computational methods for smart grid forecast problems, which are devoted to present the recent approaches of deep learning and machine learning as well as their successful applications in smart grid forecast. (3) Artificial intelligence enabled computational methods for smart grid dispatch problems, consisting of edge-cutting intelligent decision-making approaches, which help determine the optimal solution of smart grid dispatch. The book is useful for university researchers, engineers, and graduate students in electrical engineering and computer science who wish to learn the core principles, methods, algorithms, and applications of artificial intelligence enabled computational methods.

Proceedings of the Air Force Conference on Fatigue and Fracture of Aircraft Structures and Materials Air Force Flight Dynamics

Laboratory (U.S.) 1971 The document is comprised of papers presented at the Air Force Conference on Fatigue of Aircraft Structures and Materials, sponsored by the Air Force Flight Dynamics Laboratory (AFFDL) and the Air Force Materials Laboratory (AFML), Air Force Systems Command. The purpose of the Conference was to discuss technological advancements in fatigue and fracture theory. The Conference was comprised of ten technical sessions (including two panel discussions) entitled 'The Role of Materials in Structures'; 'Fundamentals I + II'; 'Criteria'; 'Fracture I + II'; 'Phenomena I + II'; 'Analysis'; 'Design and Service Experience'. A total of fifty-six technical papers were presented.

The Handloader's Manual of Cartridge Conversions John J. Donnelly 2011-08-17 Now available for the first time since 2003, The Handloader's Manual of Cartridge Conversions offers the handloader all the physical data, how-to designs, tools, and drawings needed to convert modern, easily obtainable materials into more than 1,000 different rifle and pistol cartridge cases, ranging from the obsolete patterns to modern, cutting-edge "wildcats." This classic guide has been revised with a new, easy-to-reference format, complete with a full index of hundreds of cartridges. This truly is the handloader's one-stop guide for creating personalized cartridges.

The Complete Outdoors Encyclopedia Vin T. Sparano 1998-08-15 A 2013 Amazon Breakthrough Novel Award Quarter-Finalist. The Paranormal Romance Guild say - "Georgiana Derwent has managed to merge the world of Oxford University, with its rich history and very British traditions with a totally entertaining and plausible vampire story. This is going to be a favourite series." A Tale of the Posh, the Privileged and the Paranormal... The Cavaliers are the most elite society at Oxford University - rich, powerful, and beautiful. No one realises that they are no ordinary students, but a group of aristocratic vampires from the English Civil War. For four hundred years they have groomed the most promising students to run the government, police, and finance in the way the vampires wish, granting them eternal life in return for absolute obedience. When Harriet French arrives at Oxford University from her working class northern state school, she's prepared for a culture shock, but not to become embroiled in the Cavaliers' scheming and bloodlust. Harriet thought she'd be busy enough juggling her demanding tutor, new friends, and the murky world of student politics. But now, she must find the rebel vampire who is killing off the members, stop the Cavaliers from orchestrating a massacre of the year's most beautiful and successful students, and defy the Society to be with the man of her dreams. Oxford Blood is a British, adult, paranormal romance. It's a tale with vampires that aren't afraid to kill and a heroine who's not afraid of sex or her own ambition. ABOUT THE AUTHOR Georgiana Derwent read History at Oxford University. Aside from the vampires, The Cavaliers Series is an exaggerated but fairly accurate portrayal of her time there. She now works in London and lives with her fiance. He's been very supportive throughout the writing of her books, mainly because he likes to claim that all the most attractive characters are based on him. Georgiana fell in love with vampire novels after reading "The Vampire Diaries" back in 2000. At the time it was a struggle to find any similar paranormal romances, a situation that it's fair to say seems to have been rectified in the last few years. She now loves paranormal series such as True Blood, fantasy novels, and modern literary works in roughly equal measure. Ever since her teens, she wanted to write a vampire series. Ever since going to Oxford she wanted to write a book about her experiences there. During a dull few months between finishing university and starting her graduate job, she had the idea of combining the two and "The Cavaliers Series" was born.
