Principles and Modern Applications of Mass Transfer Operations Jaime Benitez 2002-05-28 A complete, contemporary account of mass transfer operations at the undergraduate level. While Mass Transfer Operations is a required course in every undergraduate chemical engineering program in the world, there does not exist a comprehensive text on the subject that is specifically tailored to the undergraduate reader. Principles and Modern Applications of Mass Transfer Operations responds to this need, providing a thorough, accessible text that presents the latest advances in the science as well as sets of targeted questions that challenge students' knowledge. The focus throughout Jaime Benitez's peerless study is on making the

student consider computation from the start of a mass transfer dilemma. Twenty-five to thirty problems at the end of each chapter ensure that readers will remain actively engaged with the material. Principles incorporates examples of computational software such as Mathcad 2001, Matlab(r), Mathematica, and Aspen Graphics, and also includes an ftp site that offers problems for each of these software applications as well as a Solutions Manual. Chapters encompass: * Fundamentals of mass transfer * Convective mass transfer * Interphase mass transfer * Equipment for gas-liquid mass transfer operations * Absorption and stripping * Distillation * Liquid-liquid extraction Ideal for a first course in mass transfer operations, this text will also prove valuable to chemical and environmental engineers, researchers, and

university faculty.

Process Dynamics and Control Dale E. Seborg
2016-11-16 The new 4th edition of Seborg's *Process Dynamics and Control* provides full topical coverage for process control courses in the chemical engineering curriculum, emphasizing how process control and its related fields of process modeling and optimization are essential to the development of high-value products. A principal objective of this new edition is to describe modern techniques for control processes, with an emphasis on complex systems necessary to the development, design, and operation of modern processing plants. Control process instructors can cover the basic material while also having the flexibility to include advanced topics.

Problem Solving in Chemical and Biochemical Engineering with POLYMATH, Excel, and MATLAB Michael B. Cutlip 2008 *Problem Solving in Chemical and Biochemical Engineering with POLYMATH", Excel, and*

MATLAB , Second Edition, is a valuable resource and companion that integrates the use of numerical problem solving in the three most widely used software packages: POLYMATH, Microsoft Excel, and MATLAB. Recently developed POLYMATH capabilities allow the automatic creation of Excel spreadsheets and the generation of MATLAB code for problem solutions. Students and professional engineers will appreciate the ease with which problems can be entered into POLYMATH and then solved independently in all three software packages, while taking full advantage of the unique capabilities within each package. The book includes more than 170 problems requiring numerical solutions. This greatly expanded and revised second edition includes new chapters on getting started with and using Excel and MATLAB. It also places special emphasis on biochemical engineering with a major chapter on the subject and with the integration of biochemical problems throughout the book.

**Plant Design and Economics for Chemical
Engineers, Fifth Edition (POD)** Max S. Peters
2026-01-09 An essential "one-stop" guide to
chemical process design and evaluation The fifth
edition of Plant Design and Economics for
Chemical Engineers is a major revision of the
popular fourth edition. There are new chapters
on process synthesis, computer-aided design,
and design of chemical reactors. A traditionally
strong feature of the text, economic analysis, has
been revamped and updated. Another strength,
equipment sizing and cost estimation, is updated

and expanded as well. These improvements also reflect changes in equipment availability. The numerous real examples throughout the book include computer or hand solutions, and often both. There is a new increased emphasis on computer use in design, economic evaluation, and optimization. Concepts, strategies, and approaches to computer use are featured. These concepts are not tied to particular software programs and therefore apply to wide a range of applications software, of both current and future release.

Separation Process Engineering Phillip C. Wankat 2012 The Definitive, Fully Updated Guide to Separation Process Engineering-Now with a Thorough Introduction to Mass Transfer Analysis *Separation Process Engineering, Third Edition*, is the most comprehensive, accessible guide available on modern separation processes and the fundamentals of mass transfer. Phillip C. Wankat teaches each key concept through detailed, realistic examples using real data-

including up-to-date simulation practice and new spreadsheet-based exercises. Wankat thoroughly covers each of today's leading approaches, including flash, column, and batch distillation; exact calculations and shortcut methods for multicomponent distillation; staged and packed column design; absorption; stripping; and more. In this edition, he also presents the latest design methods for liquid-liquid extraction. This edition contains the most detailed coverage available of membrane separations and of sorption separations (adsorption, chromatography, and ion exchange). Updated with new techniques and references throughout, *Separation Process Engineering, Third Edition*, also contains more than 300 new homework problems, each tested in the author's Purdue University classes. Coverage includes Modular, up-to-date process simulation examples and homework problems, based on Aspen Plus and easily adaptable to any simulator Extensive new coverage of mass transfer and diffusion, including both Fickian

and Maxwell-Stefan approaches Detailed discussions of liquid-liquid extraction, including McCabe-Thiele, triangle and computer simulation analyses; mixer-settler design; Karr columns; and related mass transfer analyses Thorough introductions to adsorption, chromatography, and ion exchange—designed to prepare students for advanced work in these areas Complete coverage of membrane separations, including gas permeation, reverse osmosis, ultrafiltration, pervaporation, and key applications A full chapter on economics and energy conservation in distillation Excel spreadsheets offering additional practice with problems in distillation, diffusion, mass transfer, and membrane separation

Carbon Capture Jennifer Wilcox 2012-03-28 This book approaches the energy science sub-field carbon capture with an interdisciplinary discussion based upon fundamental chemical concepts ranging from thermodynamics, combustion, kinetics, mass transfer, material

properties, and the relationship between the chemistry and process of carbon capture technologies. Energy science itself is a broad field that spans many disciplines -- policy, mathematics, physical chemistry, chemical engineering, geology, materials science and mineralogy -- and the author has selected the material, as well as end-of-chapter problems and policy discussions, that provide the necessary tools to interested students.

Process Intensification Fernando Israel Gómez-Castro 2019-10-21 Intensified processes have found widespread application in the chemical and petrochemical industries. The use of intensified systems allows for a reduction of operating costs and supports the “greening” of chemical processes. However, the design of intensified equipment requires special methodologies. This book describes the

fundamentals and applications of these design methods, making it a valuable resource for use in both industry and academia.

Heavy Metal Toxicity in Public Health John

Kanayochukwu Nduka 2020-06-24 It is often said that the “dosage” of any substance determines its remedy or poison effect. Heavy metal sources encompass sewage, pesticides, fertilizers, environmental contamination, occupational exposure/contact through inhalation, ingestion, and skin. Before the advent of technology/the industrial revolution, communicable diseases ravaged the human race but this seems to have given way to non-communicable diseases such as cancers, renal failure, hormonal distortion enzymes, inhibition of fetal growth, and DNA damage causing negative health issues due to heavy metals. This book brings to the fore probably the most recent experimental research/review on heavy metal contamination, remediating techniques, cellular tissue damage,

and toxicological and antioxidant effects of heavy metals. It is hoped that its contents will make interesting reading for all.

Membranes for Environmental Applications
