Cornell University Courses of Study Cornell University 1992

The Coen & Hamworthy Combustion Handbook Stephen Londerville 2013-03-25 The rigorous treatment of combustion can be so complex that the kinetic variables, fluid turbulence factors, luminosity, and other factors cannot be defined well enough to find realistic solutions. Simplifying the processes, *The Coen & Hamworthy Combustion Handbook* provides practical guidance to help you make informed choices about fuels, burners, and associated combustion equipment—and to clearly understand the impacts of the many variables. Editors Stephen B. Londerville and Charles E. Baukal, Jr, top combustion experts from John Zink Hamworthy Combustion and the Coen Company, supply a thorough, state-of-the-art overview of boiler burners that

covers Coen, Hamworthy, and Todd brand boiler burners. A Refresher in Fundamentals and State-of-the-Art Solutions for Combustion System Problems Roughly divided into two parts, the book first reviews combustion engineering fundamentals. It then uses a building-block approach to present specific computations and applications in industrial and utility combustion systems, including those for Transport and introduction of fuel and air to a system Safe monitoring of the combustion system Control of flows and operational parameters Design of a burner/combustion chamber to achieve performance levels for emissions and heat transfer Avoidance of excessive noise and vibration and the extension of equipment life under adverse conditions Coverage includes units, fluids, chemistry, and heat transfer, as well as atomization, computational fluid dynamics

(CFD), noise, auxiliary support equipment, and the combustion of gaseous, liquid, and solid fuels. Significant attention is also given to the formation, reduction, and prediction of emissions from combustion systems. Each chapter builds from the simple to the more complex and contains a wealth of practical examples and full-color photographs and illustrations. Practical Computations and Applications for Industrial and Utility Combustion Systems A ready reference and refresher, this unique handbook is designed for anyone involved in combustion equipment selection, sizing, and emissions control. It will help you make calculations and decisions on design features, fuel choices, emissions, controls, burner selection, and burner/furnace combinations with more confidence.

Transport Phenomena in Fires
Mohammad Faghri 2008

Controlled fires are beneficial for the generation of heat and power while uncontrolled fires, like fire incidents and wildfires, are detrimental and can cause enormous material damage and human suffering. This edited book presents the state-of-the-art of modeling and numerical simulation of the important transport phenomena in fires. It describes how computational procedures can be used in analysis and design of fire protection and fire safety. Computational fluid dynamics, turbulence modeling, combustion, soot formation, thermal radiation modeling are demonstrated and applied to pool fires, flame spread, wildfires, fires in buildings and other examples.

Internal Combustion Processes of Liquid Rocket Engines Zhen-Guo Wang 2016-08-29 This book concentrates on modeling and numerical simulations of combustion in liquid rocket engines, covering liquid propellant atomization, evaporation of liquid droplets, turbulent flows, turbulent combustion, heat transfer, and combustion instability. It presents some state of the art models and numerical methodologies in this area. The book can be categorized into two parts. Part 1 describes the modeling for each subtopic of the combustion process in the liquid rocket engines. Part 2 presents detailed numerical methodology and several representative applications in simulations of rocket engine combustion.

lifecycle costs in ship design and operations amidst stringent regulations and fluctuating market conditions. MOSES 2023 provided a vibrant forum for sharing innovative research, practices, and policies, and the proceedings encompass contributions from academics, industry experts, and emerging researchers, spanning diverse topics such as system modelling, optimization, control, and environmental sustainability. Highlights from the conference included a new roundtable on Data and Digitalisation, which brought together leading figures from industry and academia to explore the integration of IoT, AI, and blockchain technologies in maritime operations. This discussion focused on challenges related to data privacy, integration, and cybersecurity, underpinning the strategic importance of digital technologies in enhancing operational efficiency and safety. We invite scholars, professionals, and enthusiasts

in ship energy systems to explore these proceedings, encapsulating the insights and discussions from MOSES 2023. *AIAA Journal* American Institute of Aeronautics and Astronautics 2007
