

In Search Of Global Patterns

The Political Economy of Basic Human Needs Bruce Edward Moon 1991 This volume reflects a new emphasis in development economics on conditions that promote the realization of human potential. Moon defines development goals as attainment of basic needs and the reduction of absolute poverty. He evaluates the effects of the state and political system, as well as the role of the military in relation to these goals, and makes a careful distinction between absolute poverty of basic-needs deprivation and the relative poverty associated with income inequality. Asserting that "the normative case for concern with the poor is unassailable, universal, and compelling," the author insists that "the provision of basic needs may be necessary for rapid growth." The volume includes a discussion of methodological premises in an appendix. ISBN

Analysis and Comparison of Metaheuristics Erik Cuevas

2022-11-02 This book presents a comparative perspective of current metaheuristic developments, which have proved to be effective in their application to several complex problems. The study of biological and social entities such as animals, humans, or insects that manifest a cooperative behavior has produced several computational models in metaheuristic methods. Although these schemes emulate very different processes or systems, the rules used to model individual behavior are very similar. Under such conditions, it is not

clear to identify which are the advantages or disadvantages of each metaheuristic technique. The book is compiled from a teaching perspective. For this reason, the book is primarily intended for undergraduate and postgraduate students of Science, Electrical Engineering, or Computational Mathematics. It is appropriate for courses such as Artificial Intelligence, Electrical Engineering, Evolutionary Computation. The book is also useful for researchers from the evolutionary and engineering communities. Likewise, engineer practitioners, who are not familiar with metaheuristic computation concepts, will appreciate that the techniques discussed are beyond simple theoretical tools since they have been adapted to solve significant problems that commonly arise in engineering areas.
