**Making It Count** Arunabh Ghosh 2022-01-11 "Among the biggest challenges facing leaders of the newly established People's Republic of China (PRC) was how much they did not know. In 1949, at the end of a long sequence of wars, the government of one of the largest states in the world committed to fundamentally re-engineering its society and economy via socialist planning while having almost no hard, reliable statistical data about their own country. This book is a history of attempts made to resolve this "crisis in counting." Drawing on a wealth of official, institutional, and private sources culled from China, India, and the United States, the author explores the choices made and the effects they engendered through a series of vivid encounters with political leaders, professional statisticians, academics, ordinary statistical workers, and even literary figures. Early reliance on Soviet-inspired methods of enumeration became increasingly untenable in China by the middle of the 1950s. A series of unprecedented and unexpected exchanges with Indian statisticians followed, as the Chinese sought to learn about the then exciting new technology of random sampling. These developments were, in turn, overtaken by the tumult of the Great Leap Forward (1958-1961), when both probabilistic and exhaustive methods were rejected and statistics was refashioned into an essentially ethnographic enterprise. The author argues that this history, usually narrowly described as a universal, if European history, cannot be understood without acknowledging Soviet and Indian influences which not only revises existing models of Cold War science but also globalizes the wider developments in the history of statistics and data. For historians of China and social science, and political scientists, sociologists, and anthropologists studying modern China"--

*The New Walford Guide to Reference Resources* Ray Lester 2005 The New Walford highlights the best resources to use when undertaking a search for accurate and relevant information, saving you precious time and effort. For those looking for a selective and evaluative reference resource that really delivers on its promise, look no further. In addition to print sources, The New Walford naturally covers an extensive range of e-reference sources such as digital databanks, digital reference services, electronic journal collections, meta-search engines, networked information services, open archives, resource discovery services and websites of premier organizations in both the public and private sectors. But rather than supplying a list of all available known resources as a web search engine might, The New Walford subject specialists have carefully selected and evaluated available resources to provide a definitive list of the most appropriate and useful. With an emphasis on quality and sustainability, the subject specialists have been careful to assess the differing ways that information is framed and communicated in different subject areas. As a result the resource evaluations in each subject area are prefaced by an introductory overview of the structure of the relevant literature. This ensures that The New Walford is clear, easy-to-use and intuitive. - Publisher.
