Structural Equation Modeling for Health and Medicine Douglas D. Gunzler 2021-03-29 Structural equation modeling (SEM) is a very general and flexible multivariate technique that allows relationships among variables to be examined. The roots of SEM are in the social sciences. In writing this textbook, the authors look to make SEM accessible to a wider audience of researchers across many disciplines, addressing issues unique to health and medicine. SEM is often used in practice to model and test hypothesized causal relationships among observed and latent (unobserved) variables, including in analysis across time and groups. It can be viewed as the merging of a conceptual model, path diagram, confirmatory factor analysis, and path analysis. In this textbook the authors also discuss techniques, such as mixture modeling, that expand the capacity of SEM using a combination of both continuous and categorical latent variables. Features: Basic, intermediate, and advanced SEM topics Detailed applications, particularly relevant for health and medical scientists Topics and examples that are pertinent to both new and experienced SEM researchers Substantive issues in health and medicine in the context of SEM Both methodological and applied examples Numerous figures and diagrams to illustrate the examples As SEM experts situated among clinicians and multidisciplinary researchers in medical settings, the authors provide a broad, current, on the ground understanding of the issues faced by clinical and health services researchers and decision scientists. This book gives health and medical researchers the tools to apply SEM approaches to study complex relationships between clinical measurements, individual and community-level characteristics, and patient-reported scales.

Introduction to Mediation, Moderation, and Conditional Process Analysis, Second Edition Andrew F. Hayes 2017-10-19 Lauded for its easy-to-understand, conversational discussion of the fundamentals of mediation, moderation, and conditional process analysis, this book has been fully revised with 50% new content, including sections on working with multicategorical antecedent variables, the use of PROCESS version 3 for SPSS and SAS for model estimation, and annotated PROCESS v3 outputs. Using the principles of ordinary least squares regression, Andrew F. Hayes carefully explains procedures for testing hypotheses about the conditions under and the mechanisms by which causal effects operate, as well as the moderation of such mechanisms. Hayes shows how to estimate and interpret direct, indirect, and conditional effects; probe and visualize interactions; test questions about moderated mediation; and report different types of analyses. Data for all the examples are available on the companion website (www.afhayes.com), along with links to download PROCESS. New to This Edition *Chapters on using each type of analysis with multicategorical antecedent variables. *Example analyses using PROCESS v3, with annotated outputs throughout the book. *More tips and advice, including new or revised discussions of formally testing moderation of a mechanism using the index of moderated mediation; effect size in mediation analysis; comparing conditional effects in models with more than one moderator; using R code for visualizing interactions; distinguishing between testing interaction and probing it; and more. *Rewritten Appendix A, which provides the only documentation of PROCESS v3, including 13 new preprogrammed models that combine moderation with serial mediation or parallel and serial mediation. *Appendix B, describing how to create customized models in PROCESS v3 or edit preprogrammed models.

Monte Carlo Simulation Power Analysis Using Mplus and R. Jame Peugh 2026 Planning effective research investigations requires sophisticated power analysis techniques. This book provides readers with clearly explained tools for using Monte Carlo simulations to estimate the needed sample sizes for adequate statistical power for a variety of modern research designs. Featuring step-by-step instructions, chapters move from simpler cross-sectional designs and path tracing rules to advanced longitudinal designs, while incorporating mediation, moderation, and missing data considerations. Worked-through applied examples with annotated Mplus and R syntax scripts, sample power analysis write-ups, and end-of-chapter suggested readings are also included. The companion website offers Mplus and R code for four additional power analysis models--latent variable moderation, discrete- and continuous-time

survival analyses, cross-sectional and longitudinal two-level models, and moderated mediation--as well as supplemental computational materials. *Encyclopedia of Sport Management* Paul M Pedersen 2024-09-06 This thoroughly updated second edition of the Encyclopedia of Sport Management is an authoritative reference work that provides detailed explanations of critical concepts within the field.

Positive organizational psychology and leadership in organizational behavior and culture Gozde Sezen-Gultekin 2023-10-06

HRM and Employability Jasmijn van Harten 2022-12-26 Employability is attracting growing attention from researchers and practitioners alike given the contemporary employment landscape - one characterized by technological changes, ageing populations, and competitive organizational environments. This interest is in part motivated by the realisation that employability implies a win-win situation as employable workers have stocks of knowledge, skills, and abilities, and they are flexible and open to change. However, the role of the employer and specifically their investments in Human Resource Management policies and practices are largely absent in the current employability discourse. Employability is usually regarded as an individual asset in which employees carry almost all responsibility for employability maintenance and development. Remarkably little has been done to remedy the neglect of the employer perspective and advance knowledge and practice. This book brings together contributions from an international team of renowned management scholars who explore how Human Resource Management investments affect workers' employability. Drawing on empirical evidence from all over the world, this book informs researchers, practitioners, and students in the fields of business and management, especially those with a particular interest in HRM and organizational behaviour. The chapters in this book were originally published as a special issue of The International Journal of Human Resource Management.
