Perinatal Bonding Disorders

Toshinori Kitamura 2019-03-22

This unique book explores the details of bonding disorder: the

psychopathology of parental attitudes towards forming a relation between the baby and parents. The difficulties in perinatal bonding are one of the most important but unduly neglected issues in the perinatal mental health field. This book introduces the latest knowledge based on unique empirical investigations. As a compilation of papers by Japanese clinical researchers, this book includes conceptual analysis, causes, adverse consequences, and interventions. Each author introduces his or her own original work in addition to ample references from previous studies. The volume will be an excellent resource for researchers, clinicians, and other professionals who support families with infants in the perinatal health field.

Key Topics in Perinatal Mental Health Mauro Percudani

psychological and psychosocial interventions of the most common conditions (depression, anxiety disorders, etc.) are combined with lesser known issues, such as mother-infant relationship disorders or thoughts of infant-related harm and aggressive behaviors, sleep disturbances in puerperium, obsessional disorders, fetal death etc., paying particular attention to specific groups of perinatal patients like mothers with cancer, adolescents, fathers, migrants, and preterm babies. The chapters written by health professionals working in hospitals, community services or voluntary agencies alternate with contributions from researchers whose fields of expertise include biology and neuroscience, diagnosis and special needs, treatment and prognosis, etc., striking a balance between scientific investigation and clinical practice. The book offers a valuable tool for a wide range of professionals like psychiatrists, psychologists, gynecologists, midwives,

oncologists, pediatricians, and social workers, who want to improve their clinical practice and the effectiveness of their treatment pathways using evidence from perinatal health research.

Psychiatry P. Pichot 1985 The purpose of the World

Psychiatric Association is to coordinate the activities of its Member Societies on a world-wide scale and to advance enquiry into the etiology, pathology, and treatment of mental illness. To further this purpose, the Association organizes mono- or multithematic Regional Symposia in different parts of the world twice a year, and World Congresses dealing with all individual fields of psychiatry once every five or six years. Between these

meetings the continuation of the Association's scientific work is assured through the activities of its specialty sections, each covering an important field of psychiatry. The programs of the World Congresses reflect on the one hand the intention to present the coordinating functions of the Association and on the other to open a broad platform for a free exchange of views. Thus, the VII World Congress of Psychiatry, held in Vienna from July 11 to 16, 1983, was composed of two types of scientific events - those structured by the Association and those left to the initiative of the participants. The first type comprised Plenary Sessions, planned by the Scientific Program Committee, and Section Symposia, organized by the WPA sections; the second embraced Free Symposia, free papers, video sessions, and poster presentations prepared by the participants. Altogether, 10 Plenary Sessions, 52 Section Symposia, and 105 Free Symposia took place, and 78
