Perspectives in Operations Management Rakesh K. Sarin 2012-12-06 In the fall of 1992 a conference honoring Elwood S. Buffa was held at the Anderson Graduate School of Management of the University of California, Los Angeles. This book is a collection of the work presented at that conference. The scholars who gathered to honor El are the prominent researchers in the field of Operations Management. Their collective work published in this book represents the richness of the field and provides the reader with valuable insights into its important issues and problems. While any grouping of the articles by these distinguished scholars will be arbitrary, I have organized the book in four sections. In the first section the articles dealing with the strategic issues in Operations Management are compiled. The articles deal with continuous improvement, quality, services, supply chain management, and creating value through operations. The articles that explore the interface of Operations Management with other functional areas, e.g. engineering and marketing, are grouped in the second section. The third section of the book contains articles that attempt to model some important planning problems that arise in the management of production and operations. Some of the papers in this section provide state of the art reviews of selected topic areas. Finally, the fourth section contains articles that deal with future directions for Operations Management. The authors offer several insights into the future evolution of the field. The book begins with the keynote address given by El Buffa at the start of the conference on November 2, 1991.

Managing Business Interfaces Amiya K. Chakravarty 2006-03-03 Amiya Chakravarty is a big name in production manufacturing and Josh Eliashberg is a huge name in marketing. This is one of the first books that examines the interface of Marketing and Production, with the chapters written by well-known people in the field. Hardcover version published in December 2003.

Market_Desc: Manufacture Managers and Executives. About The Book: The thrust of this edition is more quantitative in approach and more comprehensive in its discussion of strategic issues. It provides treatments of multi-criteria decision methods, quality control, and operations strategy not found in other texts. Divided into four sections, the first convincingly demonstrates that the operations function is of paramount importance in the success of a firm. The second section presents quantitative models, and the third and final sections discuss the design of operations systems, advanced technologies, strategy, formulation and implementation.

Japanese Manufacturing Company Lumbidi Kupanhy 1993

Intelligent Manufacturing Lynn Underwood 1994 Intelligent Manufacturing explains how appropriate use of information technology underpinned by effective management techniques can simplify, integrate and automate the manufacturing process without necessarily requiring high investment of complex systems. An appropriate information strategy supported by innovative management is the key to continuous manufacturing improvement.

The Management of Manufacturing Edward J. Anderson 1994 This text sets out to demonstrate the types of models and analysis necessary to solve problems in production management. It focuses on the flow of material

through the manufacturing process and provides a balanced, up-to-date account of the fundamentals.

Manufacturing Systems George Chryssolouris 2013-03-09 During the past twenty years, developments in the manufacturing world have revolutionized many aspects of the production process. The introduction of computer technology and automation have had a particularly great impact on manufacturing with a variety of consequences. One consequence is that manufacturing issues cannot be addressed as isolated problems; they require "systems thinking." Thus study and understanding of the behavior of manufacturing systems is an emerging field with a strong interdisciplinary character and increasing importance from an academic and industrial point of view. The purpose of this book is to provide some fundamental methods and tools which can be useful in addressing design and operation issues in manufacturing systems. It is intended as an advanced undergraduate/graduate text for students taking courses in manufacturing and manufacturing systems. The problem solution manual and laboratory handouts are available from the author. In addition, this book can be used by academicians and practitioners. It can also be used by practicing manufacturing engineers to gain insight, techniques and methods related to practical issues of manufacturing systems.

Manufacturing Systems: Theory and Practice George Chryssolouris 2006 Overviews manufacturing systems from the ground up, following the same concept as in the first edition. Delves into the fundamental building blocks of manufacturing systems: manufacturing processes and equipment. Discusses all topics from the viewpoint of four fundamental manufacturing attributes: cost, rate, flexibility and quality.
