Powerful Ideas of Science and How to Teach

Them Jasper Green 2020-07-19 A bullet dropped and a bullet fired from a gun will reach the ground at the same time. Plants get the majority of their mass from the air around them, not the soil beneath them. A smartphone is made from more elements than you. Every day, science teachers get the opportunity to blow students' minds with counter-intuitive, crazy ideas like these. But getting students to understand and remember the science that explains these observations is complex. To help, this book explores how to plan and teach science lessons so that students and teachers are thinking about the right things - that is, the scientific ideas themselves. It introduces you to 13 powerful ideas of science that have the ability to

transform how young people see themselves and the world around them. Each chapter tells the story of one powerful idea and how to teach it alongside examples and non-examples from biology, chemistry and physics to show what great science teaching might look like and why. Drawing on evidence about how students learn from cognitive science and research from science education, the book takes you on a journey of how to plan and teach science lessons so students acquire scientific ideas in meaningful ways. Emphasising the important relationship between curriculum, pedagogy and the subject itself, this exciting book will help you teach in a way that captivates and motivates students, allowing them to share in the delight and wonder of the explanatory power of science.

Non-Metallic Elements in Liquid Metals Mitsuo Shimoji 1996-03-14 The purpose of this book is to discuss the properties of non-metallic elements, when dissolved as a minor impurity in liquid metals and alloys, in terms of statistical thermodynamics, quantum mechanics and the latest structural models. The behaviour of non-metallic elements in liquid metals is one of the most important problems in metallurgical and physical chemistry, since it plays a central role in the manufacture of metallic materials.
Introduction to Chemical Principles Howard Stephen Stoker 1999 Chemistry for students who need full exposure to general chemistry but in compact, one-semester, 17-chapter, paperback format. Strong emphasis on problem solving, with over 5000 problems in end-of-chapter material, arranged in "matched pairs."
