Maximizing nutrition in crop production Food and Agriculture Organization of the United Nations 2021-11-08 Ghana's agricultural sector plays a vital role in income generation, foreign exchange earnings, employment, and food security for over 70 percent of its people. Despite the significant role of the crop production sector, limited attention has been given to maximizing its potential to address food insecurity and malnutrition. For that reason, FAO, in collaboration with World Vision, has produced this guidance note on mainstreaming nutrition into the crop production sector using a food systems approach. This guidance note aims to inform national-level policymakers and key participants in the food system on the issues and opportunities relating to Ghana's fruit and vegetable value chain, with a particular focus on smallholder households.

Engineering Practices for Agricultural Production and Water Conservation

Megh R. Goyal 2017-03-16 This informative new book takes an interdisciplinary look at agricultural and food production and how new engineering practices can be used to enhance production. With contributions from international experts from India, Russia, China, Serbia, and USA, this book presents a selection of chapters on some of these emerging practices, focusing on soil and water conservation and management; agricultural processing engineering; water quality and management; emerging agricultural crops; renewable energy use in agriculture; and applications of nanotechnology in agriculture.

Vegetable Production and Practices Gregory E Welbaum 2015-01-30

Successful vegetable production in a modern competitive market requires an understanding of many more factors than the biology of crops and the production techniques involved. This major new textbook brings the science and practice of vegetable production right up to date by addressing modern culture techniques and the recent challenges of consumer demand facing producers today. It introduces vegetable production from the perspective of producing high quality produce that satisfies the needs of the modern consumer. Beginning with the basics of how vegetables are grown using high and low input methods, including organic and sustainable production techniques, the book goes on to introduce and discuss many topics covered less comprehensively in older texts, including Good Agricultural Practices to improve quality, reduce biological contamination and secure food safety; water management; cropping systems; plasticulture; protected culture and mineral nutrition. *Vegetable Production and Practices* also introduces the use of molecular biology for genetic improvement of crops. Issues specific to individual vegetable crops are addressed by family, including their diseases, harvesting, quality attributes and other issues of increasing importance to consumers, including the role of vegetables in human health.

Professor Gregory E. Welbaum has a long history of teaching successful courses in horticulture at Virginia Tech and other universities in the US and worldwide. *Vegetable Production Practices* has been specifically designed to accompany courses in vegetable crop production, so is ideally suited to inspire students in crop and horticultural sciences, as well as provide a useful reference for experienced practitioners.

Technological Advancement In Indian Agriculture Dr. Gaurav Aggarwal : Agriculture, as a backdrop in India's economy, is critical because to its substantial percentage of job and livelihood generation. In India, agriculture's contribution to GDP is dropping while the number of people involved in agriculture and related activities remains high, creating worries about both land and labour productivity. Throughout history, technological innovations have had a significant impact on agriculture. So far, technological development in Indian agriculture has remained an unfinished undertaking. The influence of new technology varies according on crop and locale. Clearly, the progress made thus far has been limited and symbolic, and much more has to be done to appropriately promote and spread it. A necessary first step in this direction would be to examine the emerging trends and technologies in agricultural advancement, which is precisely the objective of this inquiry. The book provides an interesting narrative of technological advancement in agriculture by analyzing in depth technological method used. Also it gives all the details from emerging technology in advancement of Indian agriculture such as breeding methods and seed farming technologies in agricultural crops, plant cell and tissue culture techniques in crop improvement, remote sensing in agriculture, effects of genetically modified (GM) crops on modern agriculture, nano technology in agriculture, precision farming, emerging technologies for integrated pest management, pioneer methods of fruit production in modern horticulture, modern era remote sensing and GIS in horticulture sector: opportunities and challenges and impact of economic factors on nutritional diet. This book would certainly assume greater significance in creating database for realistic planning and implementation of future technological advancement in agriculture and would help in adding to existing store-house of knowledge concerning latest technology in agriculture and related issues. It would also guide readers in deriving insight in understanding many aspects relevant particularly to technological advancement in Indian agriculture.

Postharvest Technology Of Horticultural Crops K P Sudheer 2020-09-26 The book post harvest technology assumes great attention during recent years since preservation of agricultural produce is a basic necessity to sustain agricultural production. It helps to add value of produce, thus having great scope for employment generation at the production catchments. In this book, the authors have attempted to consolidate different methods of post harvest technology of fruits and vegetables focusing on recent advances. This book will benefit both practicing food technologist/post harvest technologist who are searching for answers to critical technical questions of post harvest technology. Further, it will be useful to agricultural engineers, food processors, food scientist, researchers and progressive farmers and to those who are working in relevant fields. It is intended to fill a gap in presently available post harvest technology literature
