Treatise on Process Metallurgy: Volume Four, Industrial Production provides academics with the fundamentals of the manufacturing of metallic materials, from raw materials into finished parts or products. In these fully updated volumes, coverage is expanded into four volumes, including Process Fundamentals, encompassing process fundamentals, structure and properties of matter; thermodynamic aspects of process metallurgy, and rate phenomena in process metallurgy; Processing Phenomena, encompassing interfacial phenomena in high temperature metallurgy, metallurgical process phenomena, and metallurgical process technology; Metallurgical Processes, encompassing mineral

processing, aqueous processing, electrochemical material and energy processes, and iron and steel technology, non-ferrous process principles and production technologies, and more. The work distills the combined academic experience from the principal editor and the multidisciplinary four-member editorial board. -

Provides the entire breadth of process metallurgy in a single work - Includes in-depth knowledge in all key areas of process metallurgy - Approaches the topic from an interdisciplinary perspective, providing broad range coverage on topics

Evolutionary Computation

Wellington Santos 2009-10-01

This book presents several recent advances on Evolutionary Computation, specially evolution-based optimization methods and hybrid algorithms for several applications, from optimization and learning to pattern recognition and bioinformatics.

This book also presents new algorithms based on several analogies and metafores, where one of them is based on philosophy, specifically on the philosophy of praxis and dialectics. In this book it is also presented interesting applications on bioinformatics, specially the use of particle swarms to discover gene expression patterns in DNA microarrays. Therefore, this book features representative work on the field of evolutionary computation and applied sciences. The intended audience is graduate, undergraduate, researchers, and anyone who wishes to become familiar with the latest

research work on this field.

Advances in Solidification

Processes Howard Jones 1993

These papers written by metallurgists, physicists, chemical and mechanical engineers, discuss the use of hydrodynamics, thermodynamics, kinetics in developing and understanding solidification processes. The main topics covered include crystallization kinetics, nucleation and thermodynamics during solidification processes, metastable solidification processing and stimulation of different solidification processes.

Optimization of Oscillation Parameters in Continuous Casting Process of Steel Manufacturing: Genetic Algorithms Versus

Differential Evolution Arya K. Bhattacharya 2009 The relationships between oscillation performance metrics like lubrication, oscillation mark depth and peak friction and the design parameter set consisting of stroke s , frequency f and deviation from sinusoidal waveform δ , are expressed in a mathematical framework. This enables the

definition of explicit objective functions and constraints that are used to drive a Genetic Algorithm towards the best-performing parameter set across the entire range of casting speed. Comparison with parameter sets provided by OEM and implemented currently, shows that the synthesized set provides much better lubrication the prime objective of oscillating the mold while also reducing oscillation marks and peak friction. Furthermore, this is achieved with only minor variation of the parameters across the speed range. Substitution of a Genetic Algorithm by a Differential Evolution algorithm for the above synthesis generates exactly identical results from the engineering domain perspective, but with a convergence rate that is faster by at least one order of magnitude. The reasons for this are analyzed, leading to a conclusion that for small dimensioned problems DE is definitely a better approach, but for larger dimensioned

ones it is advisable to use GA in the initial phases and switch to DE at a later stage as the approach to global optimum becomes asymptotic.
