Always dispose of oily shop cloths in an enclosed

container to prevent a fire. SEE FIGURE 1-69.

Whenever oily cloths are thrown together on the

floor or workbench, a chemical reaction can

occur, which can ignite the cloth even without

an open flame. This process of ignition without

an open flame is called spontaneous combustion

A customer complained that after driving for a

while, he got a static shock whenever he

grabbed the door handle when exiting the

vehicle. The customer thought that there must

be an electrical fault and that the shock was

coming from the vehicle itself. In a way, the

shock was caused by the vehicle, but it was not a

fault. The service technician sprayed the cloth

seats with an anti-static spray and the problem

did not reoccur. Obviously, a static charge was

being created by the movement of the driver's

clothing on the seats and discharged when the

driver touched the metal door handle"--

Using the Engineering Literature, Second

Edition Bonnie A. Osif 2011-08-09 With the

encroachment of the Internet into nearly all

aspects of work and life, it seems as though

information is everywhere. However, there is

information and then there is correct,

appropriate, and timely information. While we

might love being able to turn to Wikipedia® for

encyclopedia-like information or search Google®

for the thousands of links on a topic, engineers

need the best information, information that is

evaluated, up-to-date, and complete. Accurate,

vetted information is necessary when building

new skyscrapers or developing new prosthetics

for returning military veterans While the award-

winning first edition of *Using the Engineering*

Literature used a roadmap analogy, we now

need a three-dimensional analysis reflecting the

complex and dynamic nature of research in the

information age. *Using the Engineering*

Literature, Second Edition provides a guide to

the wide range of resources available in all fields

of engineering. This second edition has been thoroughly revised and features new sections on nanotechnology as well as green engineering. The information age has greatly impacted the way engineers find information. Engineers have an effect, directly and indirectly, on almost all aspects of our lives, and it is vital that they find the right information at the right time to create better products and processes. Comprehensive and up to date, with expert chapter authors, this book fills a gap in the literature, providing critical information in a user-friendly format.
