Managing Technological Innovation: Tools And Methods Tugrul U Daim 2017-03-09 The management of technological innovation is both an art, as well as a science; the process involves the know-how and technological core skills to deliver the functionality on the one hand, and (with an ear on the ground) the ability to identify changes in technologies to come up with new innovations on the other. This requires, as a result, frameworks, system tools, and methodologies to improve the yield in innovations. Managing Technological Innovation provides a set of tools and case studies for R&D managers to effectively manage technological innovations — from the identifying of technological needs to the launch of the product. The book is divided into five parts. Part 1 addresses the policies and strategies necessary to provide direction to R&D organizations in the management of technological innovation. Part 2 focuses on technological assessment; presenting the methods available to better matching of technologies to strategic directions, supported with case studies to illustrate the evaluation methods. Part 3 covers the development and building of technological portfolios with new products, as well as mitigation strategies. Part 4 focus on the execution phase of built portfolios — the development of new products. And finally, Part 5 rounds up with a study on the factors which impact the diffusion of technological innovations into the market place. This book is a practical guide for R&D professions and designers, as well as a case study reference for graduate students in pursuit of their project work.

Fusion for Profit Sharan Jagpal 2008-09-26 The corporate world is typically structured in silos. Managers urgently need to overcome this "silo" effect by fusing ideas across different functional areas in the firm. In *Fusion for Profit*, Sharan Jagpal, a well-known and highly respected multidisciplinary researcher and business consultant, explains in simple language using real-world examples how managers can use sophisticated concepts to fuse different functional areas in the firm, especially marketing and finance, to increase the firm's value.

Education for All Nicholas Burnett 2005 The 2006 EFA Global Monitoring Report, maps the global literacy challenge, drawing attention to new methods for measuring it more accurately. It analyses how societies have attained widespread literacy before critically examining national strategies and international commitments aimed at achieving this goal. Although adult literacy rates doubled in Sub-Saharan Africa, the Arab States and South and West Asia from 1970 to 2000, the rate of progress has slowed considerably since 1990, according to the report. If present trends continue, only 86% of the world's adults will be literate by 2015, up from 82% today. Reflecting deep-seated gender inequalities in many societies, women account for 64% of the adults worldwide who cannot read or write with understanding. This figure remains virtually unchanged from 63% in 1990. Every year, the EFA Global Monitoring Report assesses where the world stands on its commitment to provide a basic education to all children, youth and adults by 2015. Its developed by an independent team and published by UNESCO, with the UIS as a key member of the EFA monitoring team, providing statistical annexes and analysis which lay the foundations for the report.

Political Change in the United States Kenneth M. Dolbear 1973 A Manhattan boy spends much of his time designing go-karts but never tries to build one until he meets an older black boy.

Real World Investigations for Social Studies John D. Hoge 2004 This innovative book presents case studies --called investigations-- that combine ready-to-implement middle and high school lessons with complementary guidelines to demonstrate how the principles of Contextual Teaching and Learning (CTL) can be used to meet NCSS social studies curriculum standards. This combination of CTL principles and NCSS standards creates a book that shows teachers-in-training examples of quality social studies instruction while simultaneously illustrating essential teaching methods. KEY TOPICS: Intended to develop the attributes necessary for informed citizenship, each investigation provides a sequence of lessons using the teaching/learning styles that research has shown to be most effective with these age

groups. Each investigation requires readers to face problematic issues, research and analyze data, construct meaning and understanding, evaluate competing points-of-view, and, finally, reach and defend conclusions. All coverage keyed to NCSS standards--with an investigation for each of the ten mandated competencies. MARKET: Core or supplemental reading for middle and secondary social studies methods courses.

The Valuation of Information Technology Christopher Gardner 2000-02-18 Top executives support The Valuation of Information Technology "This is the first book which I have seen that places corporate decision-making on a logical and quantitative basis. Decisions which have traditionally been done by the 'seat of the pants' are subjected to the same rigorous analysis as is routine in the hard sciences. I think this book strikes off in a completely new direction and deserves to be read by anyone contemplating a career in business." -Dr. Mel Schwartz, Nobel Laureate in Physics 1988 and Professor Emeritus, Stanford and Columbia Universities "An insightful, rewarding evaluation of information technology-with the aim being the creation of shareholder value. Chris Gardner's detailed work shows how powerfully constructive and destructive the forces of innovation can be. Mastering information technology is the key to twenty-first-century commercial success. This book is a driver toward that mastery." -Tom Gardner, The Motley Fool (Fool.com) "Finally, a clear set of tools for those of us who are trying to find a path through a jungle of complexity. Chris Gardner has clearly and crisply provided a road map of rationality to help direct our path through a chaotic world of accelerating change." -Peter Sprague, Founder, Chairman, and CEO, Wave Systems, and former Chairman of National Semiconductor "The Valuation of Information Technology provides a practical, step-by-step approach for analyzing the attractiveness of an information technology system.. Highly recommended." -Derek R. Reisfield, Vice Chairman, Luminant Worldwide, and formerly President, CBS New Media, Chairman, Marketwatch.com, and Member of the Board, Sportsline USA "Information and technology are transforming commerce and challenging traditional valuation methods. The Valuation of Information Technology builds a bridge between familiar valuation, grounded on customer value, revenue, cost, and earnings contributions all on the one side, and the returns available in the new information technology context on the other. With these tools, added to thoughtful application and judgment, you will be a wiser leader investor, and consumer." -Stephen B. Bonner, President and CEO, Cancer Treatment Centers of America "Chris Gardner's book comes at the right time for many businesses which can no longer afford the guessing or the hip-shooting that has been the solution algorithm in many companies. He points out the systemic thinking that is possible and the discipline that is required to tackle the issues in a sound, responsible, and competitively superior way." -Dr. Rainer Famulla, Partner, Andersen Consulting "The Valuation of Information Technology tackles the tough problem of defining the value of new technologies company shareholders using integrated analytical techniques. The methodologies presented in the book are essential to any successful new business development. I highly recommend it." -Dr. Khasha Mohammadi, President, e-Networks, and formerly of Bell Labs "Clearly we have entered an era where many organizations are making 'bet the company' investment decisions in information technology and the Internet. Unfortunately, many of these investments are made on an emotional basis alone. The Valuation of Information Technology provides a significant advance in our ability for making these decisions on a more thoughtful, analytic basis." -Frank Ostroff, Author of The Horizontal Organization "For the first time, The Valuation of Information Technology marries corporate finance with technology marketing to create a technology decision guide focused on what matters most--shareholder value." -Jim Szafranski, Marketing Manager, Tut Systems
