**Untimely Moderns** Eeva-Liisa Pelkonen 2023-01-01 A novel exploration of the idea of nonlinear time and its place at the heart of modern art and architecture Through much of the twentieth century, a diverse group of thinkers engaged in an interdisciplinary conversation about the meaning of time and history for modern art and architecture. The group included architects Louis Kahn, Everett Victor Meeks, James Gamble Rogers, Paul Rudolph, and Eero Saarinen; artists Anni and Josef Albers; philosopher Paul Weiss; and art historians Henri Focillon, George Kubler, Sibyl Moholy-Nagy, and Vincent Scully. These figures were

unified by their resistance to the idea that, to be considered modern, art and architecture had to be of its time, as well as by the pivotal role that Yale University held as a backdrop to their thinking. These thinkers sponsored a new kind of approach, one that Eeva-Liisa Pelkonen terms "untimely," emphasizing a departure from a sequential course of events. Ideas about temporal duration, new tradition, the presence of the past, and the shape of time were among the concepts they explored. With an interdisciplinary focus, Pelkonen reveals previously unexplored connections among key figures of American intellectual and artistic culture at midcentury whose works and words would shape modern architecture.

## **Design Engineering and Manufacturing**

Benoit Eynard  
2016-09-02 This book gathers papers presented at the International Joint Conference on Mechanics, Design Engineering and Advanced Manufacturing (JCM 2016), held on 14-16 September, 2016, in Catania, Italy. It reports on cutting-edge topics in product design and manufacturing, such as industrial methods for integrated product and process design; innovative design; and computer-aided design. Further topics covered include virtual simulation and reverse engineering; additive manufacturing; product manufacturing; engineering methods in medicine and education; representation techniques; and nautical, aeronautics and aerospace design and modeling. The book is divided into eight main sections, reflecting the focus and primary themes of the conference. The contributions presented here will not only provide researchers, engineers and experts in a range of

industrial engineering subfields with extensive information to support their daily work; they are also intended to stimulate new research directions, advanced applications of the methods discussed, and future interdisciplinary collaborations.

## **Quality of Life**

### **Improvement: Smart Approaches for the Working and Aging Populations**

Sabina Baraković 2024-03-19

Quality of life (QoL) is a broad concept that has many definitions and meanings depending on the context under consideration. It can be perceived as the overall enjoyment of life, and a multidimensional concept which emphasizes the self-perceptions of an individual's current state of mind, which is affected in a complex way by the person's physical health, psychological state, personal beliefs, social relationships, and their relationship to salient features of their environment. On the other hand,

demographic data suggests an increased need for workers worldwide and a rapid aging trend in the active workforce as well as in general. This trend of workforce deficit and population aging will be even more prominent in the future. Therefore, in order to have and sustain a healthy, motivated, and productive workforce, but also healthy, independent, and active elderly adults, one must improve their QoL, and vice versa. Improving QoL will improve general public health, and in turn create communities who can contribute in diverse and positive ways to both promote and sustain health for future generations.
