101+ Great Ideas for Introducing Key Concepts in Mathematics Alfred S. Posamentier 2006-05-12 Multiply math mastery and interest with these inspired teaching tactics! Invigorate instruction and engage students with this treasure trove of "Great Ideas" compiled by two of the greatest minds in mathematics. From commonly taught topics in algebra, geometry, trigonometry, and statistics, to more advanced explorations into indirect proofs, binomial theorem, irrationality, relativity, and more, this guide outlines concepts and techniques that will inspire veteran and new educators alike. This updated second edition offers more proven practices for bringing math concepts to life in the classroom, including: 114 innovative strategies organized by subject area User-friendly content identifying "objective," "materials," and "procedure" for each technique A range of teaching models, including hands-on and computer-based methods Specific and straightforward examples with step-by-step lessons Written by two distinguished leaders in the field-mathematician, author, professor, university dean, and popular commentator Alfred S. Posamentier, along with mathematical pioneer and Nobel Prize recipient Herbert A. Hauptman-this guide brings a refreshing perspective to secondary math instruction to spark renewed interest and success among students and teachers.

In the Front Door Hugh Mehan 2015-11-17 This book provides a critical analysis of the origins, nature, development, and transformation of the state and society historically and today, examining the class nature and social basis of politics and the state in different societal settings. The book emphasizes the centrality of class relations in explaining political power and the role of the state in class-divided societies by providing powerful theoretical and empirical analyses of themes in political sociology in an era of globalization. It examines in detail the major political issues and events of our time, and makes them relevant to the study of power and politics today. Students from many ethnic minority backgrounds and low-income families are underrepresented in American colleges and universities. This book describes and assesses educational policies and practices that seek to rectify this important manifestation of

structured inequality. Inspired by a commitment to providing a pathway to college and beyond, Mehan and his team document the innovative practices developed and implemented at the nationally recognized schools created by The Center for Research in Educational Equity, Access, and Teaching Excellence (CREATE) at the University of California-San Diego: the Preuss School, a 6-12 charter school on the UCSD campus for underrepresented minority students; and nearby schools located in economically depressed neighborhoods. Based on long-term research, Mehan's book makes important contributions to the literature on educational achievement disparities that exist and are growing within the United States. He sheds light on how we can improve public policy for the futures of secondary school students.

The Power of Picture Books in Teaching Math and Science Lynn Columbia 2017-05-12 This book's 50-plus lessons—each based on a different picture book or story—will help classroom teachers build a foundation for teaching math, science, and social studies concepts to their students. Each lesson uses children's literature to make challenging, abstract concepts relevant to children's lives, inviting them to learn these concepts while responding to a story's illustrations, theme, characters, and plot. The lessons also demonstrate how teachers can use children's literature to meet national standards in math, science, and social studies. Chapters 1 through 5 set the stage for using picture books, discussing the effective, imaginative integration of literature into the classroom. Teachers will learn to create an environment that ensures that when children and books come together, the experience is enjoyable and thought provoking. Chapters 6 through 9 provide individual lessons, by grade level, with detailed activities based on specific books.

Teaching Secondary and Middle School Mathematics Daniel J. Brahier 2005 Teaching Secondary and Middle School Mathematics combines up-to-date technology and research with a vibrant writing style to help teachers grasp curriculum, teaching, and assessment issues as they relate to secondary and middle school mathematics. Designed for

pre-service or in-service teachers, the second edition presents concise, current, and meaningful descriptions of what it takes to be an effective teacher of mathematics. This extensively revised, practical resource offers a balance of theory and practice, including a wealth of examples and descriptions of classroom situations to assist students in visualizing mathematics instruction in the classroom. Each chapter contains specific outcomes for the reader, a glossary of relevant terms, several discussion questions and an extensive bibliography that contains references and suggested readings. Appendices include a descriptive list of recommended Internet Web sites on mathematics education and two case studies for further discussion. **New To This Edition!** A new chapter (Chapter 7) examines four major content areas of the secondary and middle school curriculum—algebra, geometry, data analysis and probability, and discrete mathematics—and the teaching methodology and NCTM Standards specific to each area. A new chapter (Chapter 10) devoted to the topic of equity discusses special needs students, gender equity, and ethnic/cultural differences. "How Would You React?" scenarios have been added in each chapter which allow students (and professors) to explore various teaching and learning issues and ideas for making decisions in a debate setting. "Spotlight on Technology" and examples highlighting major chapter concepts involving the use of technology have been interspersed throughout and encourage students to think about the appropriate use of technology in teaching mathematics. Daniel Brahier is Associate Professor of Mathematics Education at Bowling Green State University in Ohio and a current eighth grade teacher. He is also the author of *Assessment in Middle and High School Mathematics: A Teacher's Guide* (Eye On Education, 2001). With experience as a teacher, administrator, guidance counselor, and curriculum coordinator, his teaching and writing draws from every angle. **Teaching Young Children Mathematics** Janice Minetola 2013-09-11 Teaching Young Children Mathematics provides a comprehensive overview of mathematics instruction in the early childhood classroom. Taking into account family differences, language barriers, and the presence of special needs students in many classrooms throughout the

U.S., this textbook situates best practices for mathematics instruction within the larger frameworks of federal and state standards as well as contemporary understandings of child development. Key topics covered include: developmental information of conceptual understanding in mathematics from birth through 3rd grade, use of national and state standards in math, including the new Common Core State Standards, information for adapting ideas to meet special needs and English Language Learners, literacy connections in each chapter, 'real-world' connections to the content, and information for family connections to the content.

Now I Get it Susan O'Connell 2005 Good teaching is the critical factor that helps students "get" math. Thanks to Susan O'Connell, you can provide top-notch mathematics instruction--even if you've never felt comfortable teaching it before. With *Now I Get It*, you'll increase your repertoire of instructional strategies as well as receive the information, reflective tools, and resources you need to make them work effectively. As she did in her popular *Introduction to Problem Solving*, O'Connell provides a practical guide to teaching math for understanding and clarity, only this time moving one step further to provide a complete picture of elementary math instruction. She presents advice and insight about: what a teacher's role is during math time how to actively engage your students in mathematical thinking, and how to know when they are connecting with math concepts or may require further support how to teach both computational skills and mathematical thinking skills how to use problem solving, cooperative projects, writing assignments, and real-life examples to stimulate and maintain interest how to incorporate math talk and vocabulary into your lessons. But *Now I Get It* is much more than a book of teaching ideas. Aligned to the NCTM standards and filled with smart ideas about helping students reach mandated testing benchmarks, it also offers all the research and theory you need to provide best-practice instruction. Also included are reflection questions to stimulate professional growth and an accompanying CD that bolsters your teaching with more than one hundred pages of reproducible lists, charts,

activities, and rubrics, some of which can be modified to fit your specific classroom needs. Help children make mathematics an integral part of how they live in and appreciate their world. Read *Now I Get It*, and find new ways to make your math instruction more effective and more exciting for yourself and your students.

Math & Science for Young Children Rosalind Charlesworth 2007 *Math and Science for Young Children, 5e* is a unique reference that focuses on the integration of math and science with the other important areas of child development during the crucial birth through eight age range. It also carefully addresses the ever changing and significant national standards of the following organizations: The National Association for the Education of Young Children (NAEYC), National Council of Teachers of Math (NCTM), National Science Teachers Association (NSTA), American Association for the Advancement of Science (AAAS), and the National Research Council (NRC). A valuable resource for the student learner, working professional, as well as the involved parent, *Math and Science for Young Children, 5e* is the most current volume of information of its' kind available on the market today.
