Computational Geometry and Computer  
Graphics in C++ Michael Jay Laszlo 1996 This  
book provides an accessible introduction to  
methods in computational geometry and  
computer graphics. It emphasizes the efficient  
object-oriented implementation of geometric  
methods with useable C++ code for all methods  
discussed.

Problem Solving in C++ Including Breadth and  
Laboratories Angela B. Shiflet 1998 In the

author's words, this book introduces students "to  
the analysis, design, implementation, testing,  
and debugging of programs using C++, and to  
the breadth and richness of the computer  
science discipline." PROBLEM SOLVING IN  
C++ features an early but gradual and natural  
introduction to object-oriented programming  
(starting in Chapter 3), and chapter-ending,  
built-in laboratories that directly support the  
book's presentation of concepts. It offers twenty-  
two discrete "breadth" sections that present a  
broad range of topics in computer science. The  
author presents programming in a clear, visual  
manner with ample use of examples and figures.  
Other learning features include exercises at the  
end of each section, an average of 17

programming projects per chapter, historical  
anecdotes, chapter introductions and goals,  
programming and debugging hints, chapter key  
terms and summaries, and review questions.  
**Fundamentals of Data Structures in C** Ellis  
Horowitz 1993 Designed to function as a  
textbook or as a professional reference,  
*Fundamentals of Data Structures in C* provides  
in-depth coverage of all aspects of data structure  
implementation in ANSI C. The book goes  
beyond the standard fare of stacks, queues, and

lists to offer such features as a full chapter on  
search structures and a discussion of advanced  
tree structures. Recent data structure  
innovations rarely found in other texts are  
presented, including Fibonacci Heaps, Splay  
Trees, Red-Black Trees, 2-3 Trees, 2-3-4 Trees,  
Leftist Trees, Binokcal Heaps, Min-Max Heaps,  
and Deaps.

International Conference entitled Beyond  
Databases, Architectures and Structures, BDAS  
2017, held in Ustroń, Poland, in May/June 2017.  
It consists of 44 carefully reviewed papers  
selected from 118 submissions. The papers are  
organized in topical sections, namely big data  
and cloud computing; artificial intelligence, data  
mining and knowledge discovery; architectures,  
structures and algorithms for efficient data  
processing; text mining, natural language  
processing, ontologies and semantic web;  
bioinformatics and biological data analysis;  
industrial applications; data mining tools,  
optimization and compression.

Algorithms in C++ Robert Sedgewick 1998

*Algorithms in C++* contains exercises to help  
students learn the properties of algorithms with  
a greater emphasis on abstract data types,  
modular programming, object oriented  
programming and C++ classes.

**Introduction to Programming with C++** Y.

Daniel Liang 2010 This volume presents basic  
logic and fundamental programming techniques  
that are considered essential for new  
programmers to succeed. Basic programming  
concepts are introduced on control statements,

loops, functions, and arrays before object-oriented programming is discussed. It demonstrates all the essential subjects in C++ from fundamental programming techniques to object-oriented programming, from simple functions to STL, from simple data types to classic structures. The author provides games, business applications, and mathematical problems to accentuate and demonstrate the information presented in this text.

Data Structures Using C and C++ Yedidyah

Langsam 1996 This introduction to the fundamentals of data structures explores abstract concepts, considers how those concepts are useful in problem solving, explains how the abstractions can be made concrete by using a programming language, and shows how to use the C language for advanced programming and how to develop the advanced features of C++.

Covers the C++ language, featuring a wealth of tested and debugged working programs in C and C++. Explains and analyzes algorithms -- showing step-by-step solutions to real problems. Presents algorithms as intermediaries between English language descriptions and C programs. Covers classes in C++, including function members, inheritance and object orientation, an example of implementing abstract data types in C++, as well as polymorphism.
