The Environment Chris C. Park 2001 The second edition of this fully integrated introductory text for courses in environmental studies and physical geography builds on the resounding success of the first edition, providing a comprehensive account of modern environmental issues and the physical and socio-economic framework in which they are set. It explains the principles and applications of the different parts of the Earth's system: the lithosphere, atmosphere, hydrosphere and the biosphere, and explains the interrelationships within and between these systems. It explores the present environmental crisis, examines how the planet Earth fits into the wider universe and explores human-environment interactions.

*Human Impact on Ancient Environments* Charles L. Redman 1999-10-01 Threats to biodiversity, food shortages, urban sprawl . . . lessons for environmental problems that confront us today may well be found in the past. The archaeological record contains hundreds of situations in which societies developed long-term sustainable relationships with their environments—and thousands in which the relationships were destructive. Charles Redman demonstrates that much can be learned from an improved understanding of peoples who, through seemingly rational decisions, degraded their environments and threatened their own survival. By discussing archaeological case studies from around the world—from the deforestation of the Mayan lowlands to soil erosion in ancient Greece to the almost total depletion of resources on Easter Island—Redman reveals the long-range coevolution of culture and

environment and clearly shows the impact that ancient peoples had on their world. These case studies focus on four themes: habitat transformation and animal extinctions, agricultural practices, urban growth, and the forces that accompany complex society. They show that humankind's commitment to agriculture has had cultural consequences that have conditioned our perception of the environment and reveal that societies before European contact did not necessarily live the utopian existences that have been popularly supposed. Whereas most books on this topic tend to treat human societies as mere reactors to environmental stimuli, Redman's volume shows them to be active participants in complex and evolving ecological relationships. *Human Impact on Ancient Environments* demonstrates how archaeological research can provide unique insights into the nature of human stewardship of the Earth and can permanently alter the way we think about humans and the environment.

*The Go-To Guide for Engineering Curricula, Grades 6-8* Cary I. Sneider 2014-11-25 How to engineer change in your middle school science classroom With the implementation of the Next Generation Science Standards, your students won't just be scientists—they'll be engineers. But that doesn't mean you need to reinvent the wheel. Respected science educator Cary Sneider has done the groundwork for you, collecting a full range of time-tested curriculum materials to seamlessly weave engineering and technology concepts into your math and science lessons. In this volume, you'll find descriptions of instructional materials specifically created for—and tested in—middle school science classrooms. Features include A handy table that takes you straight to the chapters most relevant to your needs In-depth commentaries and illustrative examples that demystify engineering curricula at the middle school level A vivid picture of what each curriculum looks like in the classroom, the learning goals it accomplishes, and how it helps address the NGSS More information on the integration of engineering and

technology into 21st-century science classrooms—and why it will make a difference One of the most well-respected science educators in the country, Cary Sneider was an NGSS Writing Team Leader and is an associate research professor at Portland State University. "This publication uses hands-on explorations that impact students by getting them to think like an engineer. It's also great for exploring the engineering world through experiences using science and engineering, and for the actual doing of science and engineering using the design process." —Kendall Starkweather, Executive Director International Technology Education Association "This book will help you engage your students in grade-level engineering activities. All you need to do is pick it up and get ready to implement it in your classroom." —Jo Ann Vasquez, Vice President Educational Practice for Helios Education Foundation Wild Earth 1997
