Lecture Notes: Oncology Mark Bower 2015-10-01 Cancer is one of the most exciting specialties in medicine. This book aspires to convey the authors' enthusiasm for oncology and this new edition of Oncology Lecture Notes is a must for students and trainees. There has been a revolution in the practice of oncology. The changes are due to amazing advances in basic science, and the development of new drugs and successful immunisation programmes that have followed. Cancer death rates have fallen and this is in part due to radical new treatments, effective screening programmes, and also, as a result of popular movements for change in patient care, and decreased exposure to carcinogens. Completely revised and updated, this new edition of Oncology Lecture Notes describes advances in molecular biology research and highlights the importance of patient perspectives in cancer care. The text includes many new figures and tables, an update of molecular biology and highlights new treatments. With learning objectives and key point summaries in each chapter, Oncology Lecture Notes is an ideal introduction to the biological basis and principles of treatment in oncology. Includes a companion website at www.lecturenoteseries.com/oncology featuring cases and self-assessment MCQs

Imaging for Junior Doctors Peter Kember 2000 This practical

handbook is essential reading for junior doctors who have undergone very little in the way of radiological training. It adopts a symptom-based approach, dealing with the queries junior staff on call will come across, and enables SHOs to recognise the information contained within an image and to interpret this in a clinical context. Each chapter contains a list of key points to facilitate learning and a glossary to provide quick and easy access to common radiological terms. Practical, symptom-based approach and concise text. Comprehensively illustrated with 250 high quality images. Concentrates on plain film an area which SHOs will frequently encounter and need to interpret. Distinguishes normal from abnormal and provides likely causes of abnormal appearances. Each chapter concludes with a list of key points to facilitate learning.

Pathophysiology, Risk Factors, and Management of Chronic Heart Failure

Ram B. Singh 2024-04-04 Chronic Heart Failure:

Pathophysiology, Risk factors, and Mechanisms is the first of two separate but closely related volumes which aim to provide an inclusive overview on Chronic Heart Failure (CHF). This first volume is focused on the epidemiology, classification, molecular mechanisms, pathophysiology, causes, identification and interactions of heart failure. It will explain the uncertainties and issues in Heart Failure by helping readers understand the pathophysiology of CHF in the light of behavioural risk factors. 2D and 3D speckle tracking echocardiography have been used to quantify regional alterations of longitudinal strain and area strain, through their polar projection, which allows a further evaluation of both the site and extent of myocardial damage. The analysis of strain can identify subclinical cardiac failure (myocyte remodelling) which is a major issue in CHF. Myocardial Strain, measure by speckle tracking echocardiography, is frequently attenuated in these conditions and can be utilized for the evaluation of disease progression and the effect of therapeutic interventions as well as prevention because it could be a manifestation of behavioural risk factors. These 2 separate volumes serves as essential references to both researchers and practicing clinicians, proposing novel methods of research by using behavioural and environmental risk factors as intervention agent, as well as discussing deficiency in the present approaches in management of HF and proposing new methods of early diagnosis and therapies for the clinical management of CHF. - Includes a number new and controversial topics: Roles of both behavioural and nutritional risk factors in CHF; considering behavioural intervention which may change the remodelling, as well as nutrient supplementation or change of diet in preventing CHF or converting resistant HF in to HF responding to therapy; Evidence-based knowledge on CHF, with an emphasis on viewing CHF as a disease of the brain and contribution from other systems; Pre-Heart failure which can be prevented to restore normal cardiomyocyte function; Pathogenesis of HF in chronic kidney disease; 2D and 3D speckle tracking echocardiography - Includes never-published tables and figures to aid understanding of the topics - Contributions from international leading experts in the field, written with the aim of serving both researchers and practicing clinicians
