Technology and Society 1989  
*Cities and Their Vital Systems*  
asks basic questions about the  
longevity, utility, and nature of  
urban infrastructures; analyzes  
how they grow, interact, and  
change; and asks how, when,  
and at what cost they should be  
replaced. Among the topics  
discussed are problems arising  
from increasing air travel and  
airport congestion; the  
adequacy of water supplies and  
waste treatment; the impact of  
new technologies on  
construction; urban real estate  
values; and the field of  
"telematics," the combination  
of computers and  
telecommunications that makes  
money machines and national  
newspapers possible.
