INTEREST TABLES FOR ENGINEERING

ECONOMICS PANNEERSELVAM, R.

2006-01-01 The different investment analysis approaches require various interest formulas and their values. A fairly large problem involving different types of transactions in its cash-flows may take more time to solve it, if the students compute the values of the related interest formulas and then make substitutions in the respective expressions of the investment analysis. This book gives values of different

interest factors, $(F/P, i, n)$, $(P/F, i, n)$, $(F/A, i, n)$, $(A/F, i, n)$, $(P/A, i, n)$, $(A/P, i, n)$ and $(A/G, i, n)$ for different combinations of interest rate (i) and interest period (n) in the form of tables, to serve as an aid for solving problems in “Engineering Economics” in the Examination Hall. These Interest Tables can also be usefully employed for field work while doing engineering economics analysis. The tables will be useful to students of different B.Tech. programmes and to students of M.Com and M.B.A. programmes for solving different investment analysis problems.

Multi-objective Management in Freight Logistics Massimiliano Caramia 2020-07-30

The second edition of *Multi-Objective Management in Freight Logistics* builds upon the first, providing a detailed study of freight transportation

systems, with a specific focus on multi-objective modelling. It offers decision-makers methods and tools for implementing multi-objective optimisation models in logistics. The second edition also includes brand-new chapters on green supply chain and hybrid fleet management problems. After presenting the general framework and multi-objective optimization, the book analyses green logistic focusing on two main aspects: green corridors and network design; next, it studies logistic issues in a maritime terminal and route planning in the context of hazardous material transportation. Finally, heterogeneous fleets distribution and coordination models are discussed. The book presents problems providing the mathematics, algorithms, implementations, and the related experiments for each problem. It offers a valuable resource for postgraduate students and researchers in transportation, logistics and operations, as well as practitioners working in service systems.
