C++ Frank Friedman 2001-08 This package includes one of the leading textbooks for the

CS1 in C++ course, Problem Solving, Abstraction, and Design in C++, 3e, and a brand new manual, Programming in Visual C++. This new supplement contains nearly 40 pages describing how to install and set-up Microsoft's C++ compiler, and also includes a CD-ROM containing a copy of Visual C++ 6.0. The book Problem Solving, Abstraction, and Design Using C++ presents, and then reinforces, the basic principles of software engineering and object-oriented programming while introducing the C++ programming language. One of the hallmarks of this book is the focus on program design; Professors Frank Friedman and Elliot Koffman present a Software Development Method in Chapter 1 that is revisited in the Case Studies throughout the book. This book carefully presents object-oriented programming by

balancing it with procedural programming so the reader does not overlook the fundamentals of algorithm organization and design. Object-oriented concepts are presented via an overview in Chapter 1 and then demonstrated with the use of the standard string and iostream classes and a user-defined money class throughout the early chapters. Chapter 10 shows how to write your own classes and chapter 11 shows how to write template classes. The presentation of classes is flexible and writing classes can be covered earlier if desired.

Structured and Object-oriented Problem Solving Using C++ Andrew C. Staugaard 2002

"Welcome to the third edition of my C++ text. The highly successful first edition was one of the first textbooks available for teaching C++ in the first programming course. The text was introduced at the 1994 ACM Conference in Phoenix when many were arguing the virtues of teaching C++ and OOP versus Pascal and structured programming in the first

programming course. I argued at the time, and still argue, that students need to be taught problem solving early-on using both the structured and object-oriented paradigms and, because of its hybrid nature, C++ is the only language suited to learning both of these paradigms. Since then, many institutions have made the switch from Pascal to C++ for just this reason, as well as the intense industry support for C++ language. As a result, this third edition continues to provide an introduction to both structured and object-oriented problem solving techniques using the C++ language. Of course, many improvements have been made based on using the text in numerous classrooms all over the world since 1994. As with earlier editions, the text starts from the beginning, assuming no previous knowledge of C, or any other programming language. This text is appropriate for any introductory programming (CS1 course using the C++ language as well as experienced programmers wanting an introduction to

structured and object-oriented problem solving techniques using the C++ language"-- Book Preface.

Programming, Problem Solving and Abstraction with C Alistair Moffat 2013 Professor Moffat has been a member of the academic staff at the University of Melbourne since 1987. This book has evolved out of his 20 years' teaching experience with first year students. The readable style is punctuated by more than 100 working programs and each chapter includes detailed case study, key points and exercises.

Data Abstraction & Problem Solving with C++ Frank M. Carrano 2013-11-06 This classic, best selling data structures text provides a firm foundation in data abstraction that emphasizes the distinction between specifications and implementation as the basis for an object-oriented approach. Data Abstraction & Problem Solving with C++ Frank M. Carrano 2016-03-14 This is the eBook of the printed book and may not include any media, website access codes, or print supplements that may come packaged with the bound book. For courses in C++ Data Structures Concepts of Data Abstraction and Manipulation for C++ Programmers The Seventh Edition of

Data Abstraction & Problem Solving with C++: Walls and Mirrors introduces fundamental computer science concepts related to the study of data structures. The text explores problem solving and the efficient access and manipulation of data and is intended for readers who already have a basic understanding of C++. The “walls and mirrors” mentioned in the title represent problem-solving techniques that appear throughout the text. Data abstraction hides the details of a module from the rest of the program, whereas recursion is a repetitive technique that solves a problem by solving smaller versions of the same problems, much as images in facing mirrors grow smaller with each reflection. Along with general changes to improve clarity and correctness, this Seventh Edition includes new notes, programming tips, and sample problems.

Problem Solving, Abstraction, and Design Using C++ Frank L. Friedman 1999 This best-selling text now includes coverage of the AP

string class and `apvectors`. As with the original, this book stresses problem-solving techniques, while introducing students to object-oriented concepts early. The system-defined string and stream classes and a user-defined money class are used to reinforce the importance of data modeling in programming. The vector version contains all of the classic learning features readers have come to know and trust in authors Frank Friedman and Elliot Koffman. These features include case studies, program style sections, syntax display boxes, end-of-section exercises, common-error sections, chapter reviews, quick-check exercises, and programming projects. High school teachers: If you are interested in using this text for your Advanced Placement Computer Science course, please send your name and address to `c++ap@awl.com` for more information. This book will come bundled with Addison-Wesley's Review for the Computer Science AP Exam in C++. High Schools ordering this book should

Data Abstraction and Problem Solving with C++ Frank M. Carrano 1998 "Focusing on data abstraction and data structures, the second edition of this very successful book continues to emphasize the needs of both the instructor and the student. The book illustrates the role of classes and abstract data types (ADTs) in the problem-solving process as the foundation for an object-oriented approach. Throughout the next, the distinction between specification and implementation is continually stressed. The text covers major applications of ADTs, such as searching a flight map and performing an event-

driven simulation. It also offers early, extensive coverage of recursion and uses this technique in many examples and exercises. Overall, the lucid writing style, widespread use of examples, and flexible coverage of material have helped make this a leading book in the field." --Book Jacket.

Data Abstraction & Problem Solving with C++ Frank M. Carrano 2007 The classic, best-selling *Data Abstraction and Problem Solving with C++: Walls and Mirrors* book provides a firm foundation in data abstraction that emphasizes the distinction between specifications and implementation as the basis for an object-oriented approach. This new edition offers the latest C++ features and an introduction to using Doxygen a documentation generator for C++, enhanced coverage of Software Engineering concepts and additional UML diagrams. Data Abstraction and Problem Solving with C++ Frank M. Carrano 1995 This work provides novice and professional programmers with a bridge from traditional programming methods to the object-oriented techniques available in C++. It clearly explains encapsulation and C++ classes, which are then used throughout to implement abstract data types such as lists, stacks, queues, trees and tables. Inheritance, polymorphism, templates and operator overloading are explained both conceptually and through examples. The work offers early, extensive coverage of recursion and uses the technique through many examples and exercises. It sets out to provide a firm foundation in data abstraction, emphasizing the distinction between specification and implementation.
