**Biohydrometallurgical Recycling of Metals from Industrial Wastes**

Hong Hocheng 2025-03-13 Although many available metal recycling methods are simple and fast, they are also expensive and cause environmental pollution. Biohydrometallurgical processing of metals offers an alternative to overcome these issues, as the use of biological means not only helps to conserve dwindling ore resources but also fulfills the unambiguous need to extract metals in nonpolluting, low-energy, and low-cost way. This book covers biohydrometallurgy and its application in the recovery of metals from secondary sources like wastes. Fully updated for a new edition, it provides readers with a comprehensive overview of different wastes for metal recovery and biological treatment methods that are both environmentally friendly and economically viable. Offers a detailed explanation about generation of different metals containing industrial waste Explains traditional and new biological methods of recycling Reflects research advances across different industrial waste sources including electric vehicle batteries and LCDs from computers and other devices Focuses on each waste type and explores in detail the biohydrometallurgical recovery of metals from that waste Discusses fundamental microbial studies in bioleaching and updates about the use of emerging technologies and integrated techniques with different methods in combination for metal recovery Features a new chapter on techniques for metal extraction from bioleachate This book serves as an

essential resource for researchers and professional engineers working in chemical and environmental engineering and biotechnology.

Microbial Processing of Metal Sulfides Edgardo R. Donati 2007-05-11

*BIOTECHNOLOGY - Volume X* Horst W. Doelle 2009-11-16 This Encyclopedia of Biotechnology is a component of the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty one Encyclopedias. Biotechnology draws on the pure biological sciences (genetics, animal cell culture, molecular biology, microbiology, biochemistry, embryology, cell biology) and in many instances is also dependent on knowledge and methods from outside the sphere of biology (chemical engineering, bioprocess engineering, information technology, biorobotics). This 15-volume set contains several chapters, each of size 5000-30000 words, with perspectives, applications and extensive illustrations. It carries state-of-the-art knowledge in the field and is aimed, by virtue of the several applications, at the following five major target audiences: University and College Students, Educators, Professional Practitioners, Research Personnel and Policy Analysts, Managers, and Decision Makers and NGOs.

*The ECPH Encyclopedia of Mining and Metallurgy* Kuangdi Xu 2024-07-06 This encyclopedia volume comprehensively reflects the basic knowledge and latest research results in the field of mining and metallurgy technology, as well as the latest characteristics of the development in this field. In this reference book, the knowledge system, basic concepts, basic theories, as well as important figures, representative works and institutions of these two engineering categories are well organized in encyclopedic entries. Among them, the content on mining engineering mainly includes mining and mineral processing theory, mining and mineral processing methods, as well as the safety and environmental knowledge involved in mining and mineral processing. In the metallurgical engineering field, it mainly covers metallurgy and metallurgy industry, ferrous metallurgy, non-ferrous metallurgy, powder metallurgy, plastic working of metal, coking chemicals, refractories, energy for metallurgy, physical chemistry of metallurgical process, etc. This is the first volume of a series of encyclopedias co-published by Encyclopedia of China Publishing House (ECPH), Beijing and Springer Nature.

*New Horizons in Biotechnology* S. Roussos 2013-06-29 The practice of biotechnology, though different in style, scale and substance in globalizing science for development involves all countries. Investment in biotechnology in the industrialised, the developing, and the least developed countries, is now amongst the widely accepted avenues being used for economic development. The simple utilization of kefir

technology, the detoxification of injurious chemical pesticides e.g. parathion, the genetic tailoring of new crops, and the production of a first of a kind of biopharmaceuticals illustrate the global scope and content of biotechnology research endeavour and effort. In the developing and least developed nations, and in which the 9 most populous countries are encountered, problems concerning management of the environment, food security, conservation of human health resources and capacity building are important factors that influence the path to sustainable development. Long-term use of biotechnology in the agricultural, food, energy and health sectors is expected to yield a windfall of economic, environmental and social benefits. Already the prototypes of new medicines and of prescription fruit vaccines are available. Gene based agriculture and medicine is increasingly being adopted and accepted. Emerging trends and practices are reflected in the designing of more efficient bioprocesses, and in new research in enzyme and fermentation technology, in the bioconversion of agro industrial residues into bio-utility products, in animal healthcare, and in the bioremediation and medical biotechnologies. Indeed, with each new day, new horizons in biotechnology beckon.

**Biohydrometallurgy of Chalcopyrite** Hongbo Zhao 2021-07-29 Bioleaching of chalcopyrite is always a challenge and research hotspot. The low copper extraction and dissolution kinetics restricted the industrial application of chalcopyrite bioleaching. To solve this problem, the dissolution process and passivation mechanism of chalcopyrite in bioleaching should be first studied, then the rate-limiting steps should be analysed explicitly, and finally the intensifying method can be put forward. Many scholars have made efforts to investigate the dissolution mechanism of chalcopyrite in bioleaching. However, there is no congruence of opinion as yet. Biohydrometallurgy of Chalcopyrite summarizes and discusses the reported research findings. In addition, this book publishes the related results found by the authors' research. Then, the dissolution mechanism of chalcopyrite in bioleaching is interpreted. Finally, the process intensification techniques of chalcopyrite bioleaching are provided and discussed. Hence, this book

provides useful reference and guidance in both laboratory research and industrial production. - Interprets the dissolution mechanism of chalcopyrite in bioleaching - Provides feasible technologies for intensifying chalcopyrite bioleaching - Overviews the current situations of chalcopyrite bioleaching - Helps the readers to deeply understand the bioleaching mechanisms of chalcopyrite - Provides topics for future research and potential industrial applications
