Iron & Coal Trades Review 1908 Vol. 115 includes Diamond jubilee issue, 1867-1927.

Material Agency Carl Knappett 2008-12-15 Agency is a key theme that cross-cuts a wide raft of disciplines in the humanities, social sciences and beyond; yet it is invariably discussed separately behind closed disciplinary doors. Within archaeology, agency has been characterized as a uniquely human attribute, and a means of incorporating individual intentionality into theoretical discourse. In other domains, however, notions of non-human and 'material' agency have been finding currency, and it is our aim to introduce some of these themes into archaeology and develop a non-anthropocentric approach to agency. It is anticipated that such a perspective will not only

help us achieve more convincing interpretations of the past, giving a more active role to material culture, but also throw new light on the changing role of artifacts in the present and the future. This book is a groundbreaking attempt to address questions of non-human and material agency from a wide range of perspectives and disciplines: archaeology, anthropology, sociology, cognitive science, philosophy, and economics. The editors and authors demonstrate that a distributed, relational approach to agency, incorporating both humans and artifacts, has important ramifications for how we understand material culture.

The Electrical Engineer 1900

General Aviation Aircraft Design Snorri Gudmundsson 2021-10-31 *General Aviation Aircraft Design*, Second Edition, continues to be

the engineer's best source for answers to realistic aircraft design questions. The book has been expanded to provide design guidance for additional classes of aircraft, including seaplanes, biplanes, UAS, high-speed business jets, and electric airplanes. In addition to conventional powerplants, design guidance for battery systems, electric motors, and complete electric powertrains is offered. The second edition contains new chapters: - Thrust Modeling for Gas Turbines - Longitudinal Stability and Control - Lateral and Directional Stability and Control These new chapters offer multiple practical methods to simplify the estimation of stability derivatives and introduce hinge moments and basic control system design. Furthermore, all chapters have been reorganized and feature updated material with additional analysis methods. This edition also provides an introduction to design optimization using a wing optimization as an example for the beginner. Written by an engineer with more than

25 years of design experience, professional engineers, aircraft designers, aerodynamicists, structural analysts, performance analysts, researchers, and aerospace engineering students will value the book as the classic go-to for aircraft design. - The printed book is now in color, with 1011 figures and illustrations! - Presents the most common methods for conceptual aircraft design - Clear presentation splits text into shaded regions, separating engineering topics from mathematical derivations and examples - Design topics range from the "new" 14 CFR Part 23 to analysis of ducted fans. All chapters feature updated material with additional analysis methods. Many chapters have been reorganized for further help. Introduction to design optimization is provided using a wing optimization as an example for the beginner - Three new chapters are offered, two of which focus on stability and control. These offer multiple practical methods to simplify the estimation of stability derivatives. The chapters

introduce hinge moments and basic control system design - Real-world examples using aircraft such as the Cirrus SR-22 and Learjet 45
