Neptune and Triton Dale P. Cruikshank 1995-11 The first reconnaissance of all the major planets of the Solar System culminated in the Voyager 2 encounter with Neptune in August 1989. Neptune itself was revealed as a planet with gigantic active storms in its atmosphere, and off-center magnetic field, and a system of tenuous, lumpy rings. Whereas only two satellites were known prior to the encounter, Voyager discovered six more. Triton, the largest satellite, was revealed as a frozen, icy world with clouds and layers of haze, and with vertical plumes of particles reaching five miles into the thin atmosphere. This latest Space Science Series volume presents the current level of understanding of Neptune, its rings, and its satellites, derived from the data received from the Voyager. The book's chapters are written by the world's leading authorities on various aspects of the Neptune system and are based on papers presented at an international conference held in January 1992. Covering details of Neptune's interior, atmosphere, rings, magnetic fields, and near-space environment--as well as the small satellites and the remarkable moon Triton--this volume is a unique resource for planetary scientists and astronomers requiring a

comprehensive analysis of Neptune viewed in the context of our knowledge of the other giant planets. Until another spacecraft is sent to Neptune, Neptune and Triton will stand as the basic reference on the planet.

The House of Crow John W. Wood 2022-02-03

Through generations, their honor and bravery prevailed. In the early 19th century, a Blackfoot Indian warband slaughters a group of Irish immigrants. Soon after, another war party finds the wagon - and a baby still alive in the wreckage. He soon becomes known as the White Crow - one of the Dog Soldiers of the tribe - and makes a name for himself as a warrior. But after a journey to Old California, his life takes a drastic turn. This historical fiction saga follows the life of the Crow family, from their beginnings in 1816 to the American Civil War and the times of the U.S. Marshals, and finally to the story of Charles Crow - the last son of The House of Crow.

The Neptune Challenge Polly Holyoke

2015-05-19 Danger lurks beneath. . . .

Genetically engineered to survive in the ocean, Nere and her friends are recovering from their treacherous journey to Safety Harbor, an undersea refuge founded by the scientists of the Neptune Project. But plenty of enemies prowl just outside the colony's boundaries, and when two of the children are kidnapped, Nere, her loyal dolphins, and the other Neptune kids must set out on an expedition even more perilous than their first. Tasked with infiltrating the kidnapper's high-tech undersea base, Nere soon discovers that rescuing the missing Neptune kids isn't all there is to her mission: the secret to saving the world's oceans is hidden somewhere deep inside this vast fortress, and she and her friends will have to risk everything to find it. With bloodthirsty shark mutants and savage kids roaming the corridors, will Nere and her companions find a way to save their friends, themselves, and their underwater world? The stakes couldn't be higher in this thrilling sequel to the award-winning *The Neptune Project*. Praise for *The Neptune Project* 2016-2017 Sunshine State Young Readers Award winner

2014-2015 Texas Bluebonnet Master List
 Maryland Black-Eyed Susan Book Award
 nominee Bank Street Best Children's Books of
 the Year, 2014 "Holyoke keeps her prose well-
 pitched to her audience . . . this suspenseful,
 undersea dystopia should keep middle schoolers
 hooked." --Kirkus Reviews "The book revels in
 the beauty of the underwater world and the
 creatures that inhabit it. The relationship
 between the teenagers and the dolphins -- who
 actually become characters themselves-is
 especially well crafted. The Neptune Project will
 attract male and female readers." -- VOYA
The House Of Crow Collection John W. Wood
 2023-04-07 All three books in 'The House Of
 Crow' series by John W. Wood, now available in
 one volume! White Crow: Isaiah Crow and
 Jacques LeRue's heroic intervention against
 bandits leads them to meet the powerful Batista
 family in Alta California. When Isaiah falls in
 love with Don Hernando Batista's daughter,
 Francisca, their union gives birth to Jedadiah,
 who is destined to become a formidable warrior
 and the future leader of the House of Crow. The
 Crow Legacy: Jedadiah Crow inherits a legacy of
 valor from his father, a mountain man, and a
 Crow war chief. He builds his own reputation as
 a leader during the American Civil War and
 displays integrity and courage. After the war,
 Jedadiah leads a group of former soldiers to
 California, where he sets the stage for The
 House of Crow. The House of Crow: Follow the
 heroic journey of the Crow family, beginning
 with the adoption of a baby survivor of a brutal
 massacre by a Blackfoot Indian warband. The
 child, known as the White Crow, rises to become
 a renowned warrior before his life takes an
 unexpected turn in Old California. From 1816 to
 the American Civil War and beyond, the House
 of Crow's honor and bravery are tested through
 generations, culminating in the story of Charles
 Crow, the last son. This historical fiction saga is
 a gripping tale of adventure, courage, and
 legacy.

NASA Space Science Vision Missions Marc S.
 Allen 2008 "Using a solar sail, the Solar Polar
 Imager mission would observe the Sun from a
 polar orbit to observe magnetic fields and
 convective flows in the polar regions as well as
 coronal mass ejections and the Sun's outer
 atmosphere in order to better understand the

solar dynamo and solar activity. Titan Explorer
 mission includes an orbiter with remote sensing
 instruments and an airship platform to
 investigate the atmosphere, clouds, haze, and
 surface of Saturn's moon Titan. Neptune Orbiter
 with Probes mission would use aerocapture to
 explore Neptune's rings and magnetosphere,
 which serve as an analog for the primordial solar
 nebula and accretion disks around other stars,
 and its satellite Triton, which resembles small
 objects at the outer boundary of our solar system
 today. Neptune Orbiter, Probe, and Lander
 mission would use nuclear electric propulsion to
 investigate Neptune and orbit its satellite,
 Triton. Interstellar Probe would leave the
 heliosphere to explore interstellar space,
 learning about its composition and dynamics and
 its interaction with our solar system. Observing
 distant stars with ultra-high resolution, the
 Stellar Imager mission could reveal their
 magnetic activity and internal structure, helping
 us understand solar activity and
 magnetohydrodynamics throughout the
 Universe. By bringing our understanding of
 other galaxies nearly up to our understanding of
 our own, the Modern Universe Space Telescope
 could illuminate how the chemical elements are
 created and dispersed, how normal galaxies
 form and evolve, and how stars and planetary
 systems form. Generation-X mission could detect
 the first black holes formed when the Universe
 was only a few hundred million years old.
 Advanced Compton Telescope is a wide-field
 gamma-ray spectrometer designed to uncover
 how supernovae and other stellar explosions
 create the chemical elements through an all-sky
 survey of nuclear line emissions. Far-
 Infrared/Submillimeter Interferometer in Space
 would use a two-element array to study the
 formation of the earliest-born stars and galaxies
 in the Universe and to probe the structure of the
 disks of gas and dust collapsing today to form a
 new generation of stars and planets. Single
 Aperture Far Infrared Observatory would be a
 single-spacecraft large space telescope for
 observing the early chemical history of the
 Universe and the structure of young planetary
 systems, tracking the chemistry needed for life
 from interstellar clouds to young solar systems.
 A final chapter describes an analysis of
 directions for future technology development

inspired by this portfolio of mission concepts."--
