## The Geohistorical Approach

Silvia Elena Piovan 2020-05-14

This book gives a comprehensive view of the strengths and limits of the interdisciplinary methods that work together to form the geohistorical approach to geographical and geological sciences. The geohistorical approach can be synthetically defined as a multi- and interdisciplinary approach that uses techniques and perspectives, mainly from geography, history, and natural sciences, to examine topics that inform the space-time knowledge of environment, territory, and landscape. The boundary between the application of physical and human science methods is large and hazy. This volume exists at this boundary and offers an approach that utilizes both historical data (from both physical and human records) and GIScience (e.g. GIS,

cartography, GPS, remote sensing) to investigate the evolution of the environment, territory and landscape through both space and time. The first objective of this volume is to define the term geohistorical approach. An entire chapter focuses on a review of the main disciplines that connect geography and history, a review of the terms environment, territory, and landscape as objects of study of this approach, and the definition and importance of the geohistorical approach. The second goal is to describe the methods used in the geohistorical approach. Eight chapters present the key methods also using examples of applications from the international context, offering an awareness of the potentials, limitations and accuracy of each method, with particular focus on the integration of methods. The third goal is to provide case studies to

demonstrate the use and integration of geohistorical methods from both original material and published research. A final chapter is dedicated to an interdisciplinary case study from the Venetian Plain (Italy), providing an example of the integration of almost all methods described in the book.

Keith Wilkinson 2003

*Environmental Archaeology* provides a pragmatic introduction to the subject, taking the reader step-by-step through approaches, methods and theoretical frameworks used by archaeologists, with a focus throughout on interpretation.

#### Environmental Archaeology in Ireland Eileen M. Murphy 2007

This edited volume of 16 papers provides an introduction to the techniques and methodologies, approaches

and potential of environmental archaeology within Ireland. Each of the 16 invited contributions focuses on a particular aspect of environmental archaeology and include such specialist areas as radiocarbon dating, dendrochronology, palaeoentomology, human osteoarchaeology, palynology and geoarchaeology, thereby providing a comprehensive overview of environmental archaeology within an Irish context. The inclusion of pertinent case studies within each chapter will heighten awareness of the profusion of high standard environmental archaeological research that is currently being undertaken on Irish material. The book will provide a key text for students and practitioners of archaeology, archaeological science and palaeoecology.

### **Palaeohydrology and Environmental Change** G.

Benito 1998-12-04

Paleohydrology is the study of how the composition,

distribution, and movement of water many have influenced environmental change over time. Using in-depth case studies from North America, Europe, Asia, and Australia, this book explores paleohydrological reconstruction and its implications on past and future environmental change.

### **The Earth's Land Surface**

Kenneth J Gregory 2010-04-14

This introductory text details the land surface of the earth in a readable style covering the major issues, key themes and sensitivities of the environments/landscape.

Emphasizing the major ideas and their development, each chapter includes case studies and details of influential scientists (not necessarily geomorphologists) who have contributed to the progress of understanding. Providing a very clear explanation of the understanding achieved and of the debates that have arisen, the book is comprised of 12 chapters in four sections: Visualizing the land surface explains and explores the

composition of the land surface and outlines how it has been studied Dynamics of the land surface considers the dynamics affecting the earth's land surface including its influences, processes and the changes that have occurred Environments of the land surface looks to understand the land surface in major world regions highlighting differences between the areas Management of the land surface is an examination of the current and future prospects of the management of the earth's land surface

### **Geoarchaeology of the Landscapes of Classical Antiquity**

Frank Vermeulen 2000 Geoarchaeology uses the concepts, methods and knowledge base of the earth sciences in the direct solution of archaeological problems.

### **Physical Geography**

K J Gregory 2005-10-10 This four-volume set begins by examining the knowledge of physical geography: from the quantitative revolution to current state of mathematical models. The principal

environment spheres - for example, the biosphere - are examined to show the greater concern with environmental dynamics now central to the discipline. This work includes studies of environmental change, looking at short term as well as longer term change, and evaluating aspects of global change. Volume IV focuses on the total physical environment, examining human activity and human impact; environmental hazards; and applied physical geography.

### *The Archaeology of*

### *Mediterranean Landscapes*

Kevin Walsh 2014 This volume presents a comprehensive review of palaeoenvironmental evidence and its incorporation with landscape archaeology from across the Mediterranean. A fundamental aim of this book is to bridge the intellectual and methodological gaps between those with a background in archaeology and ancient history, and those who work in the palaeoenvironmental sciences. The aim of this volume is twofold: first, to provide archaeologists and

landscape historians with a comprehensive overview of recent palaeoenvironmental research across the Mediterranean, and second, to consider ways in which this type of research can be integrated with what might be considered "mainstream" or "cultural" archaeology. This volume takes a thematic approach, assessing the ways in which environmental evidence is employed in different landscape types, from coastal zones via rivers and wetlands to islands and mountainous areas. This volume also presents analyses of how people have interacted with soils and vegetation, and revisits the key questions of human culpability in the creation of so-called degraded landscapes in the Mediterranean. It covers chronological periods from the Early Neolithic to the end of the Roman period.

### **Geomorphological Processes and Landscape Change**

David L. Higgitt 2011-07-15 The expert contributors to this cutting edge volume provide an

overview of geomorphological process activity and landscape change in Britain over the past 1000 years. The range of the book is unusually broad, encompassing hillslope, valley floor and floodplain, fluvial, estuarine and coastal processes. Provides an overview of geomorphological process activity and landscape change in Britain over the past 1000 years. The range of the book is unusually broad, encompassing hillslope, valley floor and floodplain, fluvial, estuarine and coastal processes. Considers the relevance of technological and conceptual approaches to understanding landscape dynamics. Examines key process environments highlighting significant trends and the influence of human activity, and incorporating examples and modelling. Encourages geographers to look forward to the challenges that geomorphology faces in the new millennium. Find out more information about the RGS-IBG journals by following the links below: AREA:

*Tools in Fluvial Geomorphology*  
G. Mathias Kondolf 2016-04-28  
Fluvial Geomorphology studies the biophysical processes acting in rivers, and the sediment patterns and landforms resulting from them. It is a discipline of synthesis, with roots in geology, geography, and river engineering, and with strong interactions with allied fields such as ecology, engineering and landscape architecture. This book comprehensively reviews tools used in fluvial geomorphology, at a level suitable to guide the selection of research methods for a given question. Presenting an integrated approach to the

interdisciplinary nature of the subject, it provides guidance for researchers and professionals on the tools available to answer questions on river restoration and management. Thoroughly updated since the first edition in 2003 by experts in their subfields, the book presents state-of-the-art tools that have revolutionized fluvial geomorphology in recent decades, such as physical and numerical modelling, remote sensing and GIS, new field techniques, advances in dating, tracking and sourcing, statistical approaches as well as more traditional methods such as the systems framework, stratigraphic analysis, form and flow characterisation and historical analysis. This book: Covers five main types of geomorphological questions and their associated tools: historical framework; spatial framework; chemical, physical and biological methods; analysis of processes and forms; and future understanding framework.

Provides guidance on advantages and limitations of different tools for different applications, data sources, equipment and supplies needed, and case studies illustrating their application in an integrated perspective. It is an essential resource for researchers and professional geomorphologists, hydrologists, geologists, engineers, planners, and ecologists concerned with river management, conservation and restoration. It is a useful supplementary textbook for upper level undergraduate and graduate courses in Geography, Geology, Environmental Science, Civil and Environmental Engineering, and interdisciplinary courses in river management and restoration.

Venta Belgarum: Prehistoric, Roman, and Post-Roman Winchester Francis M. Morris  
2023-12-28 This is a detailed study of the archaeology of Roman Winchester—Venta Belgarum, a major town in the south of the province of

Britannia— and its development from the regional (civitas) capital of the Iron Age people, the Belgae, who inhabited much of what is now central and southern Hampshire.

**Alluvial Geoarchaeology A. G. Brown** 2009-12-03 This comprehensive technical manual is designed to give archaeologists the necessary background knowledge in environmental science required to excavate and analyze archaeological sites by rivers and on floodplains. Bringing together information on the evolution and exploitation of floodplain and river landscapes, this text draws on examples from Britain, Europe, North America and Australasia. An important theme is the interaction between climatic and cultural forces and the transformation of riverine environments.
