Personalized Immunosuppression in Transplantation Michael Oellerich
2015-08-08 Personalized Immunosuppression in Transplantation: Role of Biomarker Monitoring and Therapeutic Drug Monitoring provides coverage of the various approaches to monitoring immunosuppressants in transplant patients, including the most recently developed biomarker monitoring methods, pharmacogenomics approaches, and traditional therapeutic drug monitoring. The book is written for pathologists, toxicologists, and transplant surgeons who are involved in the management of transplant patients, offering them in-depth coverage of the management of immunosuppressant therapy in transplant patients with the goal of maximum benefit from drug therapy and minimal risk of drug toxicity. This book also provides practical guidelines for managing immunosuppressant therapy, including the therapeutic ranges of various immunosuppressants, the pitfalls of methodologies used for determination of these immunosuppressants in whole blood or plasma, appropriate pharmacogenomics testing for organ transplant recipients, and when biomarker monitoring could be helpful. - Focuses on the personalized management of immunosuppression therapy in individual transplant patients - Presents information that applies to many areas, including mass spectrometry, assay design, assay validation, clinical chemistry, and clinical pathology - Provides practical guidelines for the initial selection and subsequent modifications of immunosuppression

therapy in individual transplant patients - Reviews the latest research in biomarker monitoring in personalizing immunosuppressant therapy, including potential new markers not currently used, but with great potential for future use - Explains how monitoring graft-derived, circulating, cell free DNA has shown promise in the early detection of transplant injury in liquid biopsy

Practical Guide to Modern Hematology Analyzers Warren Groner

1995-12-05 In recent years there has been a widespread implementation of a new generation of hematology analyzers in the laboratory. These modern cell counters have contributed significantly to our ability to automatically and precisely measure a variety of characteristics in different cell types, including leukocyte sub-classes which were previously determined only microscopically. With this revolution in the hematology laboratory, there have been enormous cost savings and there is clearly an opportunity to improve the quality of service. Here, the authors present a practical guide for the hematology laboratory professional. They review the technology used in the new devices and the integration of the analyzers into the laboratory. Performance of these counters and quality assurance strategies are also discussed, paying particular attention to the state of the art technology, its merits and the potential for future advances. At present there is no other single guide to modern hematological cell counters which focuses on laboratory practice and treats all available technologies in depth. This text, written by authors who are internationally recognized for their research in this area, will have a wide audience including laboratory directors, hematologists, pathologists, administrators, technologists and technicians involved in hematology and diagnostic testing, medical practitioners and groups handling pharmaceutical trials.
