Identification and Ecology of Freshwater Arthropods in the Mediterranean Basin Alain Maasri 2023-10-31 Identification and Ecology of Freshwater Arthropods in the Mediterranean Basin covers the entire Mediterranean basin, including parts of Europe, Asia, Africa and the Mediterranean islands, but excluding other biogeographic locations with Mediterranean climates located outside the region. The book provides an extensive description of the taxonomy and ecology of aquatic arthropods encountered in lentic and lotic habitats, as well as in less studied underground and estuarine habitats. It offers expanded taxonomic identification keys to major groups of arthropods with a description of their ecology and distribution. Keys for insects include aquatic larval stages and water-dwelling adults of Coleoptera and Heteroptera. Additional sections focus on taxa that can be encountered in adjacent brackish and estuary ecosystems as long as the taxon primarily occurs in freshwaters. This is a much-needed, comprehensive resource on the taxonomy and ecology of freshwater arthropods with an introduction to recent molecular tools for identifications. It will be particularly useful for freshwater ecologists, limnologists, environmentalists and students in the ecological sciences. - Presents taxonomic keys to genera and species to the majority of aquatic arthropod families - Provides coverage of all freshwater ecosystems of

the Mediterranean basin, with case studies and examples - Includes numerous photographs of the aquatic arthropods described in the chapters - Covers the ecology and taxonomy of organisms living in more traditionally studied lakes and streams as well as in less studied underground and estuarine habitats

Petrology and Genesis of Igneous Rocks Alok K. Gupta 2007 Petrology and Genesis of Igneous Rocks comprises of two parts - the first part (Chapters 1 to 8) deals with constituent minerals, texture, thermodynamic principles, phase relations in natural rock systems and causes of diversity in a single petrographic province. Petrology of the crust, mantle and core, the convective cycle patterns in the mantle and their relation to magma genesis and physicochemical properties of magma are also discussed in this part. Use of Isotope geology in determination of age and degree of magma mixing is included towards the end of the first part. The second part (Chapters 9-13) describes individual rock types, from various countries including their geochemistry, petrology and genesis.

1400 Historical Dates of the Town and City of Bath, and Town of Georgetown, from 1604 to 1874 Levi P. Lemont 1874 1400 Historical Dates of the Town and City of Bath, And Town of Georgetown, From 1604 To 1874 by Francis Winter Levi P. Lemont, first published in 1874, is a rare manuscript, the original residing in one of the great libraries of the world. This book is a reproduction of that original, which has been scanned and cleaned by state-of-the-art publishing tools for better readability and enhanced appreciation. Restoration Editors' mission is to bring long out of print manuscripts back to life. Some smudges, annotations or unclear text may still exist, due to permanent damage to the original work. We believe the literary significance of the text justifies offering this reproduction, allowing a new generation to appreciate it.

Reconsidering Colonial Heritage in West African Cities Krzysztof

Górny 2023-12-12 The material heritage of the colonial era is built into Africa's cities, from their urban layouts, to their architecture, monuments and street names. This book discusses the varying responses to colonial heritage in West African cities, with a particular focus on the case studies of Praia in Cape Verde, Dakar in Senegal and Banjul in The Gambia. Europeans tended to focus on cities as centres of administration, and they were often both the starting points for settlement and the locations in which power was formally handed over to new African governments. Colonialism in Praia, Dakar and Banjul was abolished at different times, under different colonial powers (Portuguese, French and British) and amongst vastly different conditions of unrest. Based on extensive original research, this book demonstrates that the contemporary approach to the contentious issue of urban colonial heritage is often determined by metropolis-colony relationship before decolonisation, postcolonial diplomatic relations as well as present-day political decisions. The book uncovers a rich relationship between politics and urban space, and between new and old. Combining insights from political sciences, history, critical geography, heritage studies and urban planning, this book will be of interest to a wide range of researchers.

Subaqueous Mass Movements and Their Consequences A.

Georgiopoulou 2020-07-08 This GSL volume focuses on underwater or subaqueous landslides with the overarching goal of understanding how they affect society and the environment. The new research presented here is the result of significant advances made over recent years in directly monitoring submarine landslides, in standardising global

datasets for quantitative analysis, constructing a global database, and leading international research projects. This volume demonstrates the breadth of investigation taking place into subaqueous landslides, and shows that while events like the recent ones in the Indonesian archipelago can be devastating they are at the smaller end of what the Earth has experienced in the past. Understanding the spectrum of subaqueous landslide processes, and therefore the potential societal impact, requires research across all spatial and temporal scales. This volume delivers a compilation of state-of-the-art papers covering topics from regional landslide databases to advanced techniques for in situ measurements, to numerical modelling of processes and hazards.

Building the Cape Verde Islands Ricardo A. S. Ramalho 2011-04-30 Hotspots are enigmatic surface features that are not easily explained in the framework of plate tectonics. Investigating their origin is the goal of this thesis, using field evidence collected in the Cape Verde Islands, a prominent hotspot archipelago in the eastern Atlantic Ocean. The approach taken is to document uplift of the islands relative to sea level and use the uplift features to test various models of hotspot development. Island uplift is thought to arise from the growth of the anomalously shallow seafloor on which the islands rest, known as the bathymetric swell, which is characteristic of hotspots. The work comprises a geological summary and detailed mapping of paleo sea level markers on Cape Verde. Isotopic dating of the markers shows that uplift on the islands over the last 6 Myr is up to 400 m, and that the uplift chronology varies among islands. Two processes act to raise the Cape Verde Islands. The dominant process is one that is local to individual islands. The regional, swell-related component is smaller, and possibly episodic. The observations provide strong constraints on swell development and on hotspot models.

T&T Clark Companion to Methodism Charles Yrigoyen Jr 2014-09-25

The first volume in the T&T Clark Companions series, this volume is a handbook on Methodism containing an introduction, dictionary of key terms, and concentrates on key themes, methodology and research problems for those interested in studying the origins and development of

the history and theology of world Methodism. The literature describing the history and development of Methodism has been growing as scholars and general readers have become aware of its importance as a world church with approximately 40 million members in 300 Methodist denominations in 140 nations. The tercentenary celebrations of the births of its founders, John and Charles Wesley, in 2003 and 2007 provided an additional focus on the evolution of the movement which became a church. This book researches questions, problems, and resources for further study.
