Comprehensive Insect Physiology, Biochemistry, and

Pharmacology Gerald A. Kerkut 1985 This volume details the origins and history of insect endocrinology, from its remarkably intuitive beginnings, through the occasionally circuitous, but ultimately successful, investigations by several generations of endocrinologists who have progressively transformed the field to one characterized by vigor, enthusiasm, and scientific excellence. From the opening chapter by the founder of the field, Sir Vincent Wigglesworth, documenting the origins of this science, to the chapter defining the new investigative area of comparative vertebrate-invertebrate endocrinology, this volume, augmented by volume 8 of this series, presents the evolution of insect endocrinology up to the most recent discoveries with a level of detail that makes it an unsurpassed resource for today's endocrinologist.

Selected Exercises for the Biochemistry Laboratory G. Douglas Crandall 1983 "Intended for the laboratory component of an introductory biochemistry course, and requiring only basic laboratory equipment (i.e., no radioactive isotopes ; no live animals), this student manual provides all necessary instruction for eight exercises on: the preparation of aqueous solutions for the laboratory ; colorimetry -- a spectrophotometric analysis of riboflavin ; dipeptide identification ; protein isolation -- the extraction and purification of wheat germ acid phosphatase ; enzymology -- the kinetic properties of wheat germ acid phosphatase ; carbohydrates -- the analysis of glycogen ; lipids -- an analysis of some common fats and oils ; and nucleic acids -- isolation and characterization of E. coli DNA. Unique to this manual is the way in which the level of difficulty and degree of student independence increases gradually" -- Back cover.
