How to Build Max-Performance Ford FE Engines

Barry Rabortnick 2010 The Ford FE (Ford Edsel)  
engine is one of the most popular engines Ford  
ever produced, and it powered most Ford and  
Mercury cars and trucks from the late 1950s to  
the mid-1970s. For many of the later years, FE  
engines were used primarily in truck  
applications. However, the FE engine is  
experiencing a renaissance; it is now popular in  
high-performance street, strip, muscle cars, and  
even high-performance trucks. While high-  
performance build-up principles and techniques  
are discussed for all engines, author Barry  
Rabortnick focuses on the max-performance  
build-up for the most popular engines: the 390  
and 428. With the high-performance revival for

FE engines, a variety of builds are being performed from stock blocks with mild head and cam work to complete aftermarket engines with aluminum blocks, high-flow heads, and aggressive roller cams. How to Build Max-Performance Ford FE Engines shows you how to select the ideal pistons, connecting rods, and crankshafts to achieve horsepower requirements for all applications. The chapter on blocks discusses the strengths and weaknesses of each particular block considered. The book also examines head, valvetrain, and cam options that are best suited for individual performance goals. Also covered are the best-flowing heads, rocker-arm options, lifters, and pushrods. In addition, this volume covers port sizing, cam lift, and the best rocker-arm geometry. The FE engines are an excellent platform for stroking, and this book provides an insightful, easy-to-follow approach for selecting the right crank, connecting rods, pistons, and making the necessary block modifications. This is the book that Ford FE fans

have been looking for.

**A Power Primer - An Introduction to the Internal Combustion Engine** Public Relations Staff GENERAL MOTORS 2013-12-19 " ... This might be called a "sketch book of engines." Pictures have been substituted for words

wherever possible, and the technical language has been held to a minimum. Most people today have at least a nodding acquaintance with the internal combustion engine. To the great majority it is what makes an automobile go. But to others it may be the motive power for a tractor or truck, a cruiser or a tug-boat, a fighter plane or a transport. It may furnish power and light to an isolated farm, to a saw-mill in the woods, or to an entire city. For today the internal combustion engine has invaded all fields, from the bottom of the ocean to the limits of the heavens. We will demonstrate that they all are based on three things AIR, FUEL and IGNITION. We need those three things to make any internal combustion engine run. We have rather arbitrarily classified them in three groups: automobile, aircraft, and Diesel..." (1955 - Public Relations Staff GENERAL MOTORS) Small Engine Technology William A. Schuster 1998-06-08 This text is designed as a bridge between the instructor's lectures and the

information furnished by the engine manufacturer. The service manuals, offered by the engine manufacturers, are filled with information that is very specific and indispensable when servicing engines, but the beginning technician has difficulty utilizing them. - Preface.
