**Petrographic Methods and Calculations** Arthur Holmes 1921

*Instruments, Industrial, Scientific* 1929

*Earth Sciences and Archaeology* Paul Goldberg 2013-11-11 Earth Sciences and Archaeology brings together contributions from an experienced group of archaeologists and geologists whose common objective is to present thorough and current reviews of the diverse ways in which methods from the earth sciences can contribute to archaeological research. Many areas of research are addressed here, including artifact analysis and sourcing, landscape reconstruction and site formation analysis, soil micromorphology and geophysical exploration of buried sites. Archaeology has benefited from geological methods in many ways in recent decades. However, in the past ten to twenty years, this informal collaboration between geologists and archaeologists has grown into a formal integration of earth science and archaeology on a significant scale. This book allows the contributors to assess where we are in terms of interdisciplinary research, which approaches work best in specific situations, and where this collaborative approach should progress to in the future.

*Ground Engineer's Reference Book* Frederic Gladstone Bell 1987 "The Ground Engineer's Reference Book provides the most comprehensive survey of ground engineering in a practical and assimilable form for the practising engineer. It systematically covers all aspects of the subject: properties and behaviour of ground; investigation in ground engineering; treatment of the ground; construction in ground engineering; numerical methods and modelling in ground engineering. Each of the specialized contributions is supported by numerous references, diagrams and tables, and the book contains over 500 illustrations." --Book jacket.
