The Ethical Chemist Jeffrey Kovac 2018-08-10 This book is an introduction to professional ethics in chemistry. After a

brief overview of ethical theory, it provides a detailed discussion of professional ethic for chemists based on the view that the specific codes of conduct derive from a moral ideal. The moral ideal presented here has three parts. The first refers to the practice of science, the second to relationships within the scientific community and the third to the relationship between science and society, particularly the uses of science. The question of why a scientist should obey the professional code is discussed in terms of the virtue of reverence, after which the ethical issues unique to chemistry are identified. A method for approaching ethical problems is presented. Finally, there is a large collection of specific ethical problems, or cases, each followed by a commentary where the issues raised by that case are discussed.

Polymer Chemistry, Second Edition Paul C. Hiemenz

2007-02-15 "Highly recommended!" - CHOICE
New Edition Offers Improved

Framework for Understanding Polymers Written by well-established professors in the field, *Polymer Chemistry, Second Edition* provides a well-rounded and articulate examination of polymer properties at the molecular level. It focuses on fundamental principles based on underlying chemical structures, polymer synthesis, characterization, and properties. Consistent with the previous edition, the authors emphasize the logical progression of concepts, rather than presenting just a catalog of facts. The book covers topics that appear prominently in current polymer science journals. It also provides mathematical tools as needed, and fully derived problems for advanced calculations. This new edition integrates new theories and experiments made possible by advances in instrumentation. It adds new chapters on controlled polymerization and chain conformations while expanding and updating material on topics such as catalysis and

synthesis, viscoelasticity, rubber elasticity, glass transition, crystallization, solution properties, thermodynamics, and light scattering. Polymer Chemistry, Second Edition offers a logical presentation of topics that can be scaled to meet the needs of introductory as well as more advanced courses in chemistry, materials science, and chemical engineering.

The Preparation of Dispersions in Liquids H.N.

Stein 2020-07-24 This work details the preparation of dispersions in liquids. It sets out to bridge the gap in information for the chemist who is not applications oriented and the chemical engineer who needs to solve problems in the field based on theoretical methods of dispersions of solids, liquids and gases. Insights are provided into many topics, including the transportation and handling of finely divided soils or highly viscous liquids; the reactions between reactants dissolved in immiscible phases; the

formation of porous materials; and filtration.

Polymers Mohamed Elzagheid 2025-07-21 The second edition of Macromolecular Chemistry broadens into two areas: biomacromolecules, Volume 1 and polymers, Volume 2. Polymers covers polymer history, polymerization reactions, polymer morphology, technology, characterization and testing, processing, and recycling. The book discusses the building blocks of synthetic polymers, comparison of macromolecules and polymers, polymer classification, and illustration of polymer chemical structures. Polymerization reactions such as step-growth polymerization and chain-growth polymerization are extensively discussed. It then presents tacticity, molecular interactions and polymer crystals. Biodegradable polymers, biomedical polymers, conducting polymers, electroluminescent polymers, water-soluble polymers, additives, adhesives, fibres, and coatings are described. The next section explores

inorganic polymers such as polysilanes, polysiloxanes, and polyphosphazenes. The book then delves into polymer characterization and testing, including Infrared Spectroscopy, Raman Spectroscopy, NMR, X-ray Spectroscopy, and Electron Microscopy, and the last section addresses selected polymer processing techniques such as moulding, casting, extrusion, coatings, and foaming.
