Airframe, basic structure of an airplane or spacecraft excluding its power plant and instrumentation; its principal components thus include the wings, fuselage, tail assembly, and landing gear. The airframe is the basic structure of an aircraft, designed to withstand aerodynamic forces and stresses imposed. Stresses include the weight of fuel, crew, and payload. The meaning of AIRFRAME is the structure of an aircraft, rocket vehicle, or missile without the power plant; also : aircraft. Airframe Design is the specialized engineering discipline focused on creating the structural framework of aircraft that maintains its shape under aerodynamic forces while in flight. An overview on loads generation, structural design philosophies, and the material used in airframe manufacture. Four types of airframe construction: (1) Truss with canvas, (2) Truss with corrugate plate, (3) Monocoque construction, (4) Semi-monocoque construction. Modern airframe history began in the United States ... An airframe consists of several vital components that work together to ensure the structural integrity and functionality of the aircraft. These components include the fuselage, wings, empennage (tail ... Understand the primary loads on an airframe, such as tension, compression, bending, torsion, and shear. Know how aerospace structures are constructed, including spars, ribs, stringers, skin, etc. The airframe of an aircraft is its skeletal structure, minus the engines - it's the framework that holds everything together, ensuring both the aircraft's integrity and the safety of its passengers. The airframe is the mechanical structure that forms the physical foundation of an aircraft. This framework provides the shape and rigidity required for flight operations.
