**Clinical Neuropsychology of Intervention** Barbara P. Uzzell 2012-12-06 Neuropsychology has been concerned with brain-behavior relationships. Clinical neuropsychology has been concerned with application of relationships to clinical problems. As interest in these topics continues, a spin-off from clinical neuropsychology has been the realization of the potential of the lineations of behavioral consequences of cerebral lesions for developing and evaluating restoration and compensation objectives. Methods for these procedures are scattered in books, journal articles, or else unwritten, and only in the minds of clinicians. Questions need to be addressed regarding the kinds of assessment selections required; the types of rehabilitation planning; the influences of the environment, communication, and personality; and the means of effectively evaluating rehabilitation procedures. A useful book is needed by clinicians working in this area. The purpose of this book is to consolidate, in one volume, current workable approaches of a subdiscipline within neuropsychology and related areas which we are calling Intervention. Problems, dilemmas, solutions, and choices are presented to the reader beginning to work in this fascinating area, and to those of us already enthralled by previous developments and outcomes. Workers with expertise in assessment for intervention and intervention strategies are chapter contributors who unravel issues, provide available empirically based theory, illustrative data, and case reports. The volume begins with a chapter that emphasizes an awareness of the potential usefulness of pathophysiology, and the recognition of spontaneous recovery in relationship to intervention. Part II of the book is devoted to identifying and developing assessment techniques relevant for intervention.
