Clinical Parasitology 1957

Clinical Parasitology Elizabeth A. Zeibig 1997 Here's a text/laboratory manual that provides practical information on performing, reading, and interpreting parasitology tests. The two-fold focus is on organism identification and laboratory diagnosis techniques. Features thorough descriptions of parasitic forms, numerous detailed drawings with labeled structures, tables on the typical characteristics of medically important parasite forms, and comparison drawings of similar parasites. Also includes case studies, chapter summaries, and color plate inserts.

Zoonoses and Communicable Diseases Common to Man and Animals Pedro N. Acha 2003-09-15 Also available as part of the complete 3 vol. set (ISBN 9275119910)

Cases in Human Parasitology Judith Stephenson Heelan 2004 Cases in Human Parasitology focuses solely on parasites that adversely affect humans. Intended as a supplement to textbooks in human parasitology for undergraduate and medical school courses, this book of 62 case studies is also an important educational reference source for health care scientists active in the field of parasitology. The first four sections cover different groups of parasites, including intestinal protozoa; blood and tissue protozoa; cestodes, trematodes, and intestinal nematodes; and blood and tissue nematodes. The last section covers challenging cases and details non-parasitic infections in patients with symptoms closely resembling those of parasitic infections. Each case study opens with a patient history and description of symptoms, and most are accompanied by a color image of the parasite described. Thought-provoking questions are posed, covering everything from diagnosis and the life cycle of the identified parasite to epidemiology and prevention. The questions stimulate discussion while emphasizing the relationship of diagnosis to patient care. Cases present new, emerging, and well-known parasites, and parasites infrequently encountered in the United States are included. The book concludes with a glossary of descriptive terms. Cases in Human Parasitology is an excellent reinforcement of material learned in a clinical or laboratory setting. It will be useful for pathology residents and infectious disease fellows in preparing for board exams and it will serve in continuing the education of medical technologists involved in diagnostic parasitology. Key Features: Over 60 case studies focusing on intestinal protozoa, blood and tissue protozoa, cestodes, trematodes, and intestinal nematodes, as well as blood and tissue nematodes Concise cases begin with patient history and symptoms, relevant clinical findings and laboratory data, and in most cases relevant four-color images; proceed with discussion questions; and conclude with answers to the questions Challenging cases throughout; final section presents students with unusual patient histories and symptoms Reinforces material which is covered in a laboratory or clinical setting

Medical Microbiology Michael Ford 2019 This text examines medical microbiology from the viewpoint of the biomedical scientist based in a microbiology laboratory. It explains the basis of key laboratory techniques as applied to medical microbiology - including bacteriology, mycology, and virology - how and why they work, and what they can tell us.

Infections, Infertility, and Assisted Reproduction Kay Elder 2004-12-09 ART treatment is vulnerable to the hazard of potential infection from many different sources: patients, samples, staff and the environment. Culture of gametes and embryos in vitro provides multiple targets for transmission of potential infection, including the developing embryo, neighbouring gametes and embryos, the couple undergoing treatment and other couples being treated during the same period. This unique situation, with multifaceted opportunities for microbial growth and transmission, makes infection and contamination control absolutely crucial in the practice of assisted reproduction, and in the laboratory in particular. Originally published in 2004, this practical book provides a basic overview of microbiology in the context of ART, providing a guide to infections in reproductive medicine. The relevant facets of the complex and vast field of microbiology are condensed and focused, highlighting information that is crucial for safe practice in both clinical and

laboratory aspects of ART.

Immunology & Serology in Laboratory Medicine - E-Book Mary Louise Turgeon 2020-12-16 Building on a solid foundation of knowledge and skills, this classic text from trusted author Mary Louise Turgeon clearly explains everything from basic immunologic mechanisms and serologic concepts to the theory behind procedures performed in the lab. This go-to resource prepares you for everything from mastering automated techniques to understanding immunoassay instrumentation and disorders of infectious and immunologic origin. Packed with learning objectives, review questions, step-by-step procedures, and case studies, this text is the key to your success in today's modern laboratory environment. - Procedural protocols help you transition from immunology theory to practical aspects of the clinical lab - Case studies allow you to apply your knowledge to real-world situations and strengthen your critical thinking skills - Updated illustrations, photographs, and summary tables visually clarify key concepts and information - Full-color presentation clearly showcases diagrams and micrographs, giving you a sense of what you will encounter in the lab - Learning objectives and key terms at the beginning of each chapter provide measurable outcomes and a framework for organizing your study efforts - Review questions at the end of each chapter provide you with review and self-assessment opportunities - NEW! Highlights of Immunology chapter presents a clear, accessible, and easy-to-understand introduction to immunology that will help you grasp the complex concepts you need to understand to practice in the clinical lab. - NEW! Stronger focus on molecular laboratory techniques. - NEW! Ten chapters include COVID-19 related topics, including Primer on Vaccines chapter covering newer vaccine production methods focusing on DNA and RNA nucleic acids and viral vectors, and covering eight different platforms in use for vaccine research and development against SARS-CoV-2 virus. - NEW! All chapters include significant updates based on reviewer feedback. - NEW! Key Concepts interwoven throughout each chapter highlight important facts for more focused learning.
