Modeling of Distributed Feedback Semiconductor Lasers Meng-Mu Shih 2010

ABSTRACT: This work demonstrates the multi-parameter modeling processes of calculating coupling coefficients of the optical waveguide structures for various distributed feedback (DFB) semiconductor lasers. These lasers operate on Near/Mid-IR and TE/TM modes. Substrate-emitting DFB quantum cascade laser analyzed and performance

improvement are discussed.

the physics of DFB semiconductor lasers. Presents a powerful modelling technique based on the transfer matrix method which can be used to improve the design of laser diodes, optical fibres and amplifiers. Examines the effect of the various corrugation shapes on the coupling coefficients and lasing characteristics of DFB laser diodes. Technical advice to improve immunity against the spatial hole burning effect. Extensive referencing throughout and a comprehensive glossary of symbols and abbreviations. Suitable for both introductory and advanced levels This is an indispensable textbook for undergraduate and postgraduate students of electrical and electronic engineering and physics as it consolidates their knowledge in this rapidly growing field. As a technical guide for the structural design of DFB laser diodes and optical filters, the book will serve as an invaluable reference for researchers in opto-electronics, and semi

conductor device physics. 2nd-order, Surface-emitting Distributed Feedback Diode Lasers James G. Lopez 1999 *Nuclear Science Abstracts* 1975 NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976, pre-dating the prestigious INIS database, which began in 1970. NSA existed as a printed product (Volumes 1-33) initially, created by DOE's predecessor, the U.S. Atomic Energy Commission (AEC). NSA includes citations to scientific and technical reports from the AEC, the U.S. Energy Research and Development Administration and its contractors, plus other agencies and international organizations, universities, and industrial and research organizations. References to books, conference proceedings, papers, patents, dissertations, engineering drawings, and journal articles from worldwide sources are also included. Abstracts and full text are provided if available.

Advances in Imaging and Electron Physics 1999-04-13
Advances in Imaging & Electron Physics merges two long-running serials--Advances in Electronics & Electron Physics and Advances in Optical & Electron Microscopy. The series features extended articles on the physics of electron devices (especially semiconductor devices), particle optics at high and low energies, microlithography, image science and digital image processing, electromagnetic wave propagation, electron microscopy, and the computing methods used in all these domains.

Handbook of Distributed Feedback Laser Diodes, Second Edition Geert Morthier

2013-09-01 Since the first

edition of this book was

published in 1997, the

photonics landscape has

evolved considerably and so

has the role of distributed

feedback (DFB) laser diodes.

Although tunable laser diodes

continue to be introduced in

advanced optical

communication systems, DFB

laser diodes are still widely

applied in many deployed

systems. This also includes

wavelength tunable DFB laser

diodes and DFB laser diode

arrays, usually integrated with

intensity or phase modulators

and semiconductor optical

amplifiers. This valuable

resource gives professionals a

comprehensive description of

the different effects that

determine the behavior of a

DFB laser diode. Special

attention is given to two new

chapters on wavelength

tunable DFB laser diodes and

bistable and unstable DFB

laser diodes. Among many

other updates throughout the reference, semi-conductor and electromagnetic professionals are also provided two new appendices. This book fully covers the underlying theory, commercial applications, necessary design criteria, and future direction of this technology.

Laser Diode Modulation and

Noise Klaus Petermann

1991-04-30 Laser diodes

represent a key element in the emerging field of opto electronics which includes, for example, optical communication, optical sensors or optical disc systems. For all these applications, information is either transmitted, stored or read out. The performance of these systems depends to a great deal on the performance of the laser diode with regard to its modulation and noise characteristics. Since the modulation and noise characteristics of laser diodes are of vital importance for optoelectronic systems, the need for a book arises that

concentrates on this subject.

This book thus closes the gap between books on the device physics of semiconductor lasers and books on system design. Complementary to the specific topics concerning modulation and noise, the first part of this book reviews the basic laser characteristics, so that even a reader without detailed knowledge of laser diodes may follow the text. In order to understand the book, the reader should have a basic knowledge of electronics, semiconductor physics and optical communications. The work is primarily written for the engineer or scientist working in the field of optoelectronics; however, since the book is self-contained and since it contains a lot of numerical examples, it may serve as a textbook for graduate students. In the field of laser diode modulation and noise a vast amount has been published during recent years. Even though the book contains more than 600 references, only a small part of the existing literature is included.
