**Labour in a Global World** T. Nichols 2005-06-10 This book gets behind much generality about globalisation to examine the production of relatively familiar commodities such as refrigerators and ovens in different countries. By considering a range of countries - China, Taiwan and South Korea, South Africa, Brazil and Turkey - it makes a substantive contribution to the understanding of the diffusion of management methods, the role of the state in employee relations, the nature of trade unionism and the impact of social structure on production relations.

**Refrigeration** Carroll Gantz 2015-07-04 For thousands of years, humans coped with heat by harvesting and storing natural ice and devising natural cooling systems that utilized ventilation and evaporation. By the mid 1800s, people began developing huge refrigeration machines to manufacture ice. By the early 1900s, engineers developed electric domestic refrigerators, which by 1927 were affordable convenient household appliances. By then, an increasingly sophisticated public demanded more modern-looking appliances than engineers could produce, and a new breed of designers entered the manufacturing world to provide them. During the Depression, modern designs not only increased sales but resulted in the kitchen appliances we now use. Today refrigeration preserves perishable food for worldwide distribution, makes tropical climates habitable for millions, saves lives with medical applications and enables space flight.
