Hands-On Data Visualization Jack Dougherty
2021-03-11 Tell your story and show it with data, using free and easy-to-learn tools on the web. This introductory book teaches you how to design interactive charts and customized maps for your website, beginning with simple drag-and-drop tools such as Google Sheets, Datawrapper, and Tableau Public. You'll also gradually learn how to edit open source code templates like Chart.js, Highcharts, and Leaflet on GitHub. *Hands-On Data Visualization* takes you step-by-step through tutorials, real-world examples, and online resources. This practical guide is ideal for students, nonprofit organizations, small business owners, local governments, journalists, academics, and anyone who wants to take data out of spreadsheets and

turn it into lively interactive stories. No coding experience is required. Build interactive charts and maps and embed them in your website Understand the principles for designing effective charts and maps Learn key data visualization concepts to help you choose the right tools Convert and transform tabular and spatial data to tell your data story Edit and host Chart.js, Highcharts, and Leaflet map code templates on GitHub Learn how to detect bias in charts and maps produced by others
Historical Geography 2001
Lived Topographies and Their Mediatlional Forces Gary Backhaus 2005-01-01 "This collection explores the various forms of narrative, semiotic, and technological mediation that shape the experience of place. From the East End of London to Navajo lands to Ground

Zero, Lived Topographies examines the great effect of language, mass media, surveillance, and other incursions of the contemporary world on topographical experience and description. Gary Backhaus and John Murungi have assembled a wide array of scholars to provide an interdisciplinary approach to this subject, giving this collection a unique perspective on the phenomenology of place."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. How to Lie with Maps Mark S. Monmonier 1991 Explains the basic principles of map making, tells how to evaluate maps critically, and looks at Nazi propaganda maps, real estate developers plans, and environmental impact maps

How the States Got Their Shapes Mark Stein 2008-05-27 Why does Oklahoma have that panhandle? Did someone make a mistake? We are so familiar with the map of the United States

that our state borders seem as much a part of nature as mountains and rivers. Even the oddities—the entire state of Maryland(!)—have become so engrained that our map might as well be a giant jigsaw puzzle designed by Divine Providence. But that's where the real mystery begins. Every edge of the familiar wooden jigsaw pieces of our childhood represents a revealing moment of history and of, well, humans drawing lines in the sand. *How the States Got Their Shapes* is the first book to tackle why our state lines are where they are. Here are the stories behind the stories, right down to the tiny northward jog at the eastern end of Tennessee and the teeny-tiny (and little known) parts of Delaware that are not attached to Delaware but to New Jersey. *How the States Got Their Shapes* examines: Why West Virginia has a finger creeping up the side of Pennsylvania Why Michigan has an upper peninsula that isn't attached to Michigan Why some Hawaiian islands are not Hawaii Why Texas and California

are so outsized, especially when so many Midwestern states are nearly identical in size. Packed with fun oddities and trivia, this entertaining guide also reveals the major fault lines of American history, from ideological intrigues and religious intolerance to major territorial acquisitions. Adding the fresh lens of local geographic disputes, military skirmishes, and land grabs, Mark Stein shows how the seemingly haphazard puzzle pieces of our nation fit together perfectly.

The New Nature of Maps John Brian Harley 2001 "Focusing on historical examples and the practices of modern cartography, J. B. Harley (1932-1991) offers an alternative to the dominant view that Western cartography since the Renaissance has been a progressive technological, scientific, and objective trajectory of development. This traditional view asserts that maps produce an accurate relational model of terrain and, as such, epitomize representational modernism, which is rooted in

the project of the Enlightenment; in sum, maps banish subjectivity from the image. Accordingly, cartographers have promoted a standard scientific model for their discipline, one in which a mirror of nature can be projected through geometry and measurement. Cartographers often mistakenly assess early maps by this modern yardstick, excising from the accepted canon of mapping not only maps from the premodern era but also those from other cultures that do not match Western notions of accuracy."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. [How to Lie with Maps](#) Mark Monmonier 2018-04-13 An updated edition of the "humorous, informative and perceptive" guide to how maps can lead us astray (Toronto Globe and Mail). An instant classic when first published in 1991, How to Lie with Maps revealed how the choices mapmakers make—consciously or unconsciously—mean that

every map inevitably presents only one of many possible stories about the places it depicts. The principles Mark Monmonier outlined back then remain true today, despite significant technological changes in the making and use of maps. The introduction and spread of digital maps and mapping software, however, have added new wrinkles to the ever-evolving landscape of modern mapmaking. Fully updated for the digital age, this new edition of *How to Lie with Maps* examines the myriad ways that technology offers new opportunities for cartographic mischief, deception, and propaganda. While retaining the same brevity, range, and humor as its predecessors, this third edition includes significant updates throughout as well as new chapters on image maps, prohibitive cartography, and online maps. It also includes an expanded section of color images and an updated list of sources for further reading. Praise for previous editions of *How to Lie with Maps* "Will leave you much better

defended against cheap atlases, shoddy journalism, unscrupulous advertisers, predatory special-interest groups, and others who may use or abuse maps at your expense." — Christian Science Monitor

Technical Communication in the Global

Community Deborah C. Andrews 1998 Today's technical professionals need to reach audiences and collaborate on projects across borders of culture, language, technology, and expertise. This versatile, highly readable text encourage students to think critically in a changing environment, with the goal of communicating successfully with people who may not share their values, approaches, or knowledge base. Deborah Andrews provides strategies and guidelines for communicating effectively and for enjoying the challenge of communication. Information design is a constant emphasis. *Cartographic Perspectives* 2004

Territorial Disputes Graham Huggan 1994
Huggan (English, Harvard U.) establishes basic principles for a literary cartography by charting ideological links between the physical maps of geography and the conceptual maps of literature in his comparative analysis of Canadian, Quebecoi, and Australian fiction. He argues that maps aren't merely rhetorical devices, but symbolic sites for competing heterodoxies of culture. He examines maps as symbols of national culture, and as self-parodic analogues for the literary text. Contains bandw illustrations. Annotation copyright by Book News, Inc., Portland, OR
[An Introduction to Geographical Information Systems](#) D. Ian Heywood 1998 This introductory text to the world of geographical information systems is aimed at students at all levels, from undergraduates to professionals retraining in GIS.

"Nonscientific" Traditional Maps of China
Yinong Cheng 2022-08-23 This book analyzes the drawing data and methods of the Chinese ancient maps that are neglected by the previous researches, and reevaluates the drawing theories and methods, the influences, and accuracy of the maps that represents the scientificity of Chinese ancient cartographic drawings.

British Images of Germany R. Scully
2012-10-30 *British Images of Germany* is the first full-length cultural history of Britain's relationship with Germany in the key period leading up to the First World War. Richard Scully reassesses what is imagined to be a fraught relationship, illuminating the sense of kinship Britons felt for Germany even in times of diplomatic tension.

[Geography for Educators](#) Susan Wiley Hardwick
1996 This book links the new National Geography Standards with the five Fundamental Themes of Geography using a systematic

approach that builds from basic knowledge to more complex, explaining the physical, cultural, and economic systems that interrelate and operate on the planet. It encourages teachers to move beyond the traditional stereotype of geography as place memorization toward conceptual thinking about how Earth systems work. Discusses the importance of geographic literacy in an era of increasingly important global interconnections. Surveys the historic role of geography education in North American schools and provides examples of how geography is taught in other countries. Covers "geographic education revolution" in the United States. Interrelates the Five Themes of Geography and the eighteen National Geography Standards into a uniform and convenient structure for the study of any place or any topic from a geographic perspective: Location, Place, Human-Environment Interaction, Movement, and Region. For educators or teacher-certification programs.
