Collected Courses, 1975

1976-07-28 The Academy is a prestigious international

institution for the study and teaching of Public and Private International Law and related subjects. The work of the Hague Academy receives the support and recognition of the UN. Its purpose is to encourage a thorough and impartial examination of the problems arising from international relations in the field of law. The courses deal with the theoretical and practical aspects of the subject, including legislation and case law. All courses at the Academy are, in principle, published in the language in which they were delivered in the "Collected Courses of the Hague Academy of International Law .

Freeway Traffic Modelling

and Control Antonella Ferrara

2018-04-12 This monograph provides an extended overview of modelling and control

approaches for freeway traffic systems, moving from the early methods to the most recent scientific results and field implementations. The concepts of green traffic systems and smart mobility are addressed in the book, since a modern freeway traffic management system should be designed to be sustainable. Future perspectives on freeway traffic control are also analysed and discussed with reference to the most recent technological advancements. The most widespread modelling and control techniques for freeway traffic systems are treated with mathematical rigour, but also discussed with reference to their performance assessment and to the expected impact of their practical usage in real traffic systems. In order to make the book accessible to readers of different backgrounds, some fundamental aspects of traffic theory as well as some basic control concepts, useful for better understanding the addressed topics, are provided in the book. This monograph

can be used as a textbook for courses on transport engineering, traffic management and control. It is also addressed to experts working in traffic monitoring and control areas and to researchers, technicians and practitioners of both transportation and control engineering. The authors' systematic vision of traffic modelling and control methods developed over decades makes the book a valuable survey resource for freeway traffic managers, freeway stakeholders and transportation public authorities with professional interests in freeway traffic systems. Advances in Industrial Control reports and encourages the transfer of technology in control engineering. The rapid development of control technology has an impact on all areas of the control discipline. The series offers an opportunity for researchers to present an extended exposition of new work in all aspects of industrial control.

Legal Aspects of Crowdfunding

Caroline Kleiner 2021-11-05
This book offers a comparative
perspective on 18 countries’
legal regulation of
crowdfunding. In the wake of
the financial crises of 2008, use
of this alternative financing
method has increased
substantially, in various forms.
Whereas some states have
adopted tailor-made regimes in
order to regulate but also
encourage this way of
financing projects, allowing
loans to be made by non-
banking institutions, others
still haven’t specifically
addressed the subject. An
analysis of these diverse
legislative stances offers
readers a range of legal
solutions for managing
crowdfunding activities with
regard to e.g. protecting
investors, imposing limits on
project owners, and finally the
role and duties of

intermediaries, i.e., companies
operating crowdfunding
platforms. In addition, the
content presented here
provides a legal basis for states
and supranational
organizations interested in
regulating this phenomenon to
achieve more legal certainty.
