Native Crops in Latin America Ritva Repo-Carrasco-Valencia 2022-04-11 Functional foods improve health and can reduce the risk of different diseases. In this sense, a variety of bioactive compounds present in functional foods are able to modulate inflammatory responses or exhibit interesting bioactivities such as antihypertensive, antioxidants, anticancer, antimicrobials, anticariogenics, among others. There is a revalorization and mounting characterization on ancient grain crops of Latin America such as chia, amaranth, quinoa, Andean lupin, sacha inchi. This area also possesses a huge variety of native fruits such as camu camu, goldenberry, lucuma, which have health-promoting compounds. Native Crops in Latin America: Biochemical, Processing, and

Nutraceutical Aspects explores recent investigations related to the potential use of the native crops as sources of bioactive compounds (proteins, hydrolysates, peptides, antioxidants, essential lipids, dietary fiber, pre- and probiotics) and as ingredients in functional foods. Key Features: Contributes to increasing knowledge of Latin American crops Contains information of various native crops and nutraceutical potentiality Discusses characterization of their by-products Explores revaluation and food application for enrichment food matrices This book contains recent findings impacting research in subjects such as cardiovascular and gastrointestinal systems, gut microbiota, delivery systems, product development, and gastronomy. The Manufacturing Confectioner 2002 Trends in Sustainable Chocolate Production

Charis M. Galanakis 2022-02-24 Chocolate is consumed by people of all ages in all segments of society throughout the world. However, recent changes in legislative frameworks, environmental concerns and increasing attention towards sustainability have stimulated the chocolate industry to reconsider their management policy. Current books in the market cover chocolate manufacture without taking into account sustainable practices of production, consumption and market aspects. Trends in Sustainable Chocolate Production fills this knowledge gap by covering all the important aspects of chocolate industry (manufacture,

functionality, sustainability of the supply chain, commercialization aspects and market characteristics) in one reference. Starting with the health outcomes of chocolate and an overview of its manufacture, the book explores techniques to improve the functionality, flavor and microstructure of chocolate, as well as its environmental impact through sustainable practices and supply chains. By connecting research to industry and consumer interests, this text aims to support members of the scientific community, professionals and enterprises working to develop a sustainable chocolate sector.

Natural Products in Beverages Jean-Michel Mérillon 2024-11-01 This reference book provides an overview of the active ingredients of selected plants present in beverages. The book aims to highlight according to the chapters the botanical, ethnobotanical, ecological or agronomic aspects of these botanical species used in some well-known or rarer beverages by

linking them to their phytochemistry. This book also covers the manufacturing techniques, as well as the quality control of these products of natural origin in beverages. The content is divided into five main sections containing chapters written by valuable experts in their field : (1) beverages plants with caffeine and other methylxanthines, (2) beverage plants without caffeine, (3) fruits juices, (4) alcoholic beverage plants: non-distilled beverages and (5) alcoholic beverage plants: distilled beverages. The book is a useful resource for graduate students, academics and researchers in the field of botany, agriculture, food chemistry, nutrition as well as for industrial scientists and those involved in the commercialization of phytochemicals, plants and their extracts.

Chocolate and Health Rodolfo Paoletti

2012-01-26 Cocoa and chocolate are the subjects of much research in the fields of food chemistry, food technology, and health science. We now know that cocoa contains a remarkable number of bioactive compounds, and these are being tested in humans to verify their disease prevention characteristics. This state of the art text thoroughly explores the different aspects of the relationship between chocolate and health. After introductory discussion of the historical background, careful attention is devoted to technological developments designed to improve the health-giving qualities of chocolate and

biochemical and clinical trials of cocoa and its components. Various health impacts of cocoa and chocolate are thoroughly evaluated, including acute vascular effects and effects on blood pressure, blood lipids, and platelets. Psychological drivers of chocolate consumption and craving are also considered. Readers will find this book to be a rich source of essential information on cocoa and chocolate, their purported health-giving qualities, and the advances that are being made in this area.

Fermentation Biotechnology for Functional Foods Kalidas Shetty 2025-10-31 Fermentation-based processing advanced with global food systems as humanity started to organize the domestication of agriculture from plant and animal sources. These advances emerged across regions of the world from river valley civilizations in Asia (Mesopotamia, India and China) and Africa (Egypt) to Meso-American civilizations. As food crops and animal foods emerged from domestication to advancements in post-harvest processing stages, growth of invisible microbial systems led to modified foods that aligned with local palates of the communities. This in several cases became part of food systems, as it added a mode of preservation and improved the food quality that was preferred by each community. This is how the early genesis of fermented foods from grains, fruits and vegetables to animal meats and milk products became an integral part of

Bioactive Compounds In Different Cocoa Theobroma Cacao

early civilizations over 4000 years ago and has now carried over and further developed across many countries in every region of the world. The foundations of these food fermentations are now an integral part of modern food advances as preferred food substrates and the microbial interactions that drive the metabolic processes in defined food matrixes are being scientifically advanced. This book focuses on bringing together diverse emergences and advancements of fermented foods across different regions of the world and how the metabolic processes associated with fermentation in several cases add health-relevant functional qualities across different food matrixes. This book contains 26 chapters from the Americas, Africa, Europe and Asia, bringing together the fermentation processes of diverse food substrates and their microbial processing and in several cases providing health-targeted functional benefits. Key Features: Discusses the rationale and basis of fermented food systems from across 26

diverse regions of the world with examples from the Americas, Asia, Europe and Africa Presents historical plant and animal food substrates and the metabolic processes of their fermentation across traditions of a range of countries Covers traditional food fermentations across diverse food substrates that have potentially health-relevant functional benefits Reflects and presents the role of historical, cultural and traditional food concepts of a diverse range of countries with many novel examples and how they have influenced health-relevant functional benefits Discusses the relevance of metabolic concepts of fermented and functional foods in advancing healthy food concepts This book is important for food scientists, nutritionists and the health care sector, but beyond this, it is also relevant for a wider global audience interested in a holistic health approach from food systems where examples of fermentation experience can inform new natural processing strategies to improve food quality and health.
