Chemistry John A. Olmsted 2016-01-14  
Olmsted/Burk is an introductory general chemistry text designed specifically with Canadian professors and students in mind. A reorganized Table of Contents and inclusion of SI units, IUPAC standards, and Canadian content designed to engage and motivate readers distinguish this text from many of the current text offerings. It more accurately reflects the curriculum of most Canadian institutions. Instructors will find the text sufficiently rigorous while it engages and retains student interest through its accessible language and clear problem solving program without an excess of material that makes most text appear daunting and redundant.

**Primary Processes of Photosynthesis** Gernot Renger 2008 The primary processes of photosynthesis lead to transformation of solar radiation into electrochemical Gibbs energy - the driving force for life on Earth. These intricate and fascinating processes have been researched and analysed for generations and in this two part set the Editor has brought together contributions from numerous leading scientific experts providing a compendium of information offering the most up-to-date understanding of the primary processes of photosynthesis. In addition to providing high quality structure information at atomic resolution for a range of

reaction centres and antenna complexes the contributors have competently summarized the current knowledge on the mechanisms of light harvesting, charge separation, electron transport, water cleavage and ATP synthesis. This outstanding work represents the activity of researchers across the globe and will be of utmost interest to all those working in the fields of Photochemistry, Bio-organic Chemistry, Bio-inorganic Chemistry, Crystallography, Biological Sciences, Biochemistry and related disciplines. *Botany* James D. Mauseth 2003 *Botany: An Introduction to Plant Biology, Third Edition*, provides an updated, thorough overview of the fundamentals of botany. The topics and chapters are organized in a sequence that is easy to follow, beginning with the most familiar - structure -- and proceeding to the less familiar -- metabolism -- then finishing with those topics that are probably the least familiar to most beginning students -- genetics, evolution, the diversity of organisms, and ecology.
