Design and Analysis of Accelerated Tests for Mission Critical Reliability Michael J. LuValle 2004-04-27 Early approaches to accelerated testing were based on the assumption that there was a simple acceleration factor that would correspond to a linear scaling of time from the operating stress to the accelerating stress. This corresponds to the simplest physical model of the kinetics governing the underlying degradation, but this simple model does not

The Book of the Dead of Gatseshen Rita Lucarelli 2006 This volume is devoted to the analysis of the magical contents of a funerary papyrus belonging to the so-called "Book of the Dead" genre. The papyrus of Gatseshen, daughter of the High Priest of Amon Menkheperra (middle XXIst Dynasty), consists of almost 18 meters of beautifully written hieratic text and colourful vignettes. The author has attempted to reconstruct the history of composition and arrangement of this document, by investigating in detail the thematic connections between the different spells and vignettes. By comparing the layout of this papyrus with those produced in the same area and period, a new view of the funerary religion at Thebes during the XXIst Dynasty is outlined. The overall picture which can be gained by this comparative study is that of an innovative and lively tradition of funerary scrolls, which were used not only to protect the deceased during his journey in the netherworld, but also in order to express the religious ideas of its owners. A cd-rom containing colour photos of the papyrus is supplied with the volume.

Structural Biology of the Complement System Dimitrios Morikis 2005-03-29 Of recent, the structure of the complement system has received considerable attention, including the publication of several three-dimensional structures of complement proteins. This has led to the need for an authoritative resource to provide a complete overview of the basics, as well as an explanation of the cutting-edge work being accomplished in this emerging science. *Structural Biology of the Complement System* is devoted to the full exploration of structural aspects of the complement system, with special consideration of the links between molecular structure and function. Containing the work of leading authorities across the disciplines of immunology and structural biology, the book serves both as an introductory volume for newcomers to the field and as a comprehensive reference for established researchers, in particular those whose goal is the discovery of anticomplement drugs. Written in a didactic style, this volume is an appropriate resource for students in the fields of immunology and structural biology. *Structural Biology of the Complement System* comes with downloadable resources containing color figures, a molecular structure visualization program, and files with three-dimensional coordinates of the structures described in the book. These tools allow readers to perform tailored structural manipulation and analysis, while also serving as a starting point for further research.
