House of Commons - Science and Technology Committee: Clinical Trials - HC 104 Great

Britain: Parliament: House of Commons: Science and Technology Committee 2013-09-17 Many of the trials taking place today are unregistered and unpublished, meaning that the information that they generate remains invisible to both the scientific community and the public. This undermines public trust, slowing the pace of medical advancement and potentially putting patients at risk. All trials conducted on NHS treatments-and all other trials receiving public funding-should be prospectively registered and their results published in a scientific journal.

While the focus should be on implementing this change for future trials, the Government must also do what it can to ensure that historic trials are registered and published, particularly where they have been publically funded. The Government should also take steps to facilitate greater sharing of the raw data generated during a trial in a responsible and controlled way, with the knowledge and consent of patients. The report also draws attention to the recent fall in the number of trials taking place in the UK. It finds that the need for multiple governance approvals from participating NHS organisations remained the biggest barrier to setting up a UK trial, but that lack of public awareness was also a key issue. Recruiting participants can also be a challenge. The report calls on the Government to take its recommendations into account in ongoing discussions regarding the revision of European clinical trials legislation and in its response to the European Medicines Agency's consultation on the release of clinical trial data, which closes at the end of this month

TEXT BOOK OF BIostatISTICS AND RESEARCH METHODOLOGY Dr. Ankur

Agrawal , Rajiv Yadav , Miss. Nancy Mathur , Dr. Srikanth Kumar Karumanchi , Dr. Prashant

Chandra 2024-12-07 The Text Book of Biostatistics and Research Methodology provides a comprehensive guide to the essential statistical tools and research techniques used in pharmaceuticals and health sciences. Beginning with foundational concepts like measures of central tendency and dispersion, the book simplifies statistical principles with practical pharmaceutical examples. Detailed discussions on correlation and regression offer valuable insights into the relationships between variables, making it ideal for students and professionals alike. Probability theory is explored with an emphasis on pharmaceutical applications, covering distributions, hypothesis testing, sampling methods, and error types. Parametric tests, including t-tests and ANOVA, and non-parametric tests like the Wilcoxon Rank Sum and Mann-Whitney U tests, are explained thoroughly to address a wide range of research needs. The book also covers research fundamentals, emphasizing the necessity of experimental design, plagiarism avoidance, and effective data presentation through graphs like histograms and pie charts. It further explores research methodologies, sample size determination, clinical trial phases, and techniques like blocking and confounding for experimental control. In the advanced sections, readers find in-depth guidance on regression modeling and hypothesis testing in both industrial and clinical settings. Practical applications using software like Excel, SPSS, and R are covered, supporting modern analysis needs in clinical trials and industrial applications. Finally, experimental design is extensively discussed, introducing factorial designs, response surface methodology, and optimization techniques, equipping researchers with essential tools for precise and impactful study designs.

An Introduction to Statistics in Early Phase Trials Steven Julious 2010-01-19

All new medicines and devices undergo early phase trials to assess, interpret and better understand their efficacy, tolerability and safety. An Introduction to Statistics in Early Phase Trials describes the practical design and analysis of these important early phase clinical trials and provides the crucial statistical basis for their interpretation. It clearly and concisely provides an overview of the most common types of trials undertaken in early phase clinical research and explains the different methodologies used. The impact of statistical technologies on clinical development and the statistical and methodological basis for making clinical and investment decisions are also explained. Conveys key ideas in a concise manner understandable by non-statisticians Explains how to optimise designs in a constrained or fixed resource setting Discusses decision making criteria at the end of Phase II trials Highlights practical day-to-day issues and reporting of early phase trials An Introduction to Statistics in Early

Phase Trials is an essential guide for all researchers working in early phase clinical trial development, from clinical pharmacologists and pharmacokineticists through to clinical investigators and medical statisticians. It is also a valuable reference for teachers and students of pharmaceutical medicine learning about the design and analysis of clinical trials.
