"Akashvani" (English) is a programme journal of ALL INDIA RADIO, it was formerly known as The Indian Listener. It used to serve the listener as a broadsheet of broadcasting, and give listener the useful information in an interesting manner about programmes, who writes them, take part in them and produce them along with photographs of performing artists. It also contains the information of major changes in the policy and service of the organisation. The Indian Listener (fortnightly programme journal of AIR in English) published by The Indian State Broadcasting

Service, Bombay, started on 22 December, 1935 and was the successor to the Indian Radio Times in English, which was published beginning in July 16 of 1927. From 22 August, 1937 onwards, it used to be published by All India Radio, New Delhi. From 1950, it was turned into a weekly journal. Later, The Indian listener became "Akashvani" (English) w.e.f. January 5, 1958. It was made fortnightly again w.e.f. July 1, 1983. Innovations and Advanced
Techniques in Computer and
Information Sciences and
Engineering includes selected
papers from the conference
proceedings of the
International Conference on
Systems, Computing Sciences
and Software Engineering
(SCSS 2006) which was part of
the International Joint
Conferences on Computer,
Information and Systems
Sciences and Engineering
(CISSE 2006). All aspects of
the conference were managed
on-line; not only the reviewing,
submissions and registration
processes; but also the actual
conference. Conference
participants - authors,
presenters and attendees - only
needed an internet connection
and sound available on their
computers in order to be able
to contribute and participate in
this international ground-
breaking conference. The on-
line structure of this high-
quality event allowed academic
professionals and industry

participants to contribute work and attend world-class technical presentations based on rigorously refereed submissions, live, without the need for investing significant travel funds or time out of the office. Suffice to say that CISSE received submissions from more than 70 countries, for whose researchers, this opportunity presented a much more affordable, dynamic and well-planned event to attend and submit their work to, versus a classic, on-the-ground conference. The CISSE conference audio room provided superb audio even over low speed internet connections, the ability to display PowerPoint presentations, and cross-platform compatibility (the conferencing software runs on Windows, Mac, and any other operating system that supports Java). In addition, the conferencing system allowed for an unlimited number of participants, which in turn granted CISSE the opportunity to allow all participants to attend all presentations, as

opposed to limiting the number of available seats for each session.

New Kind of Machine

Learning-Cellular Automata

Model Parimal Pal Chaudhuri

2025-04-25 This book

introduces the CAML model, a novel integration of Cellular Automata (CA) and Machine Learning (ML), designed to deliver efficient computation with minimal training data and low computing resources. CAML operates through two key perspectives: one where CA is enhanced by ML to handle complex non-linear evolution, and another where CA strengthens ML by leveraging linear CA evolution to process linear functions effectively. The book focuses on real-world applications of CA, such as in Computational Biology, where CAML models protein chains to predict mutations linked to human

mutations linked to human

diseases, using carefully designed CA rule sequences for each amino acid. Another significant application is in multi-language Sentiment Analysis, where the model analyzes text in five languages (Hindi, Arabic, English, Greek, and Georgian), without relying on pre-trained language models. CAML uses CA rules for Unicode character modeling, offering a transparent, interpretable prediction algorithm. Overall, CAML aims to drive industrial and societal applications of CA, with an emphasis on transparent results and efficient hardware design through CA's regular, modular, and scalable structure.

World Guide to Libraries Helga Lengenfelder 1989 Recent political changes in Eastern Europe made available much needed information for this edition, clearly the standard directory of the

libraries of the world, with facts and contact information for some 40,000 libraries (2,100 new to this edition) in 166 countries. Included are national, general research, university and college, professional school, government, ecclesiastical, corporate and business, and public libraries with holdings over 30,000 volumes, and special libraries with more than 5,000 volumes. The arrangement is alphabetical by country, and within countries by library type, further by place name, and finally by name of the institution.

XY models (the simplest quantum spin models) provide the organising principle for the rich variety of interconnected subjects which are covered in this book. From a generic introduction to in-depth discussions of the subtleties of the transverse field Ising and related models, it includes the essentials of quantum dynamics and quantum information. A wide range of relevant topics has also been provided: quantum phase transitions, various measures of quantum information, the effects of disorder and frustration, quenching dynamics and the Kibble-Zurek scaling relation, the Kitaev model, topological phases of quantum systems, and bosonisation. In addition, it also discusses the experimental studies of transverse field models (including the first experimental realisation of quantum annealing) and the recent realisation of the transverse field Ising model using tunable Josephson junctions. Further, it points to the obstacles still remaining to

develop a successful quantum computer.
