Conceptual Analyses of Curriculum Inquiry Methodologies Watson, Sandy White 2021-12-03

The field of curriculum inquiry has grown rapidly over the last four decades resulting in many new forms of curriculum inquiry to be used as tools to answer unique curriculum-related research questions. There are few texts available that include concise descriptions and elements of curriculum inquiry methodologies and directed at enabling researchers to wisely choose a form of curriculum inquiry most appropriate for their study. *Conceptual Analyses of Curriculum Inquiry Methodologies* presents chapters that are each devoted to a particular form of inquiry, with a conceptual analysis of the methodology, its purpose(s), its utilization, structure, and organization, all written by scholars with firsthand experience with the form of inquiry. These experts also take the liberty of citing examples of published studies that have utilized the methodology, share the types of relevant data collection instruments and forms of data produced, and also share research questions that can be answered via their form of inquiry. Covering topics such as quantitative methods of inquiry, glocalization, and educational criticism, this is an essential text for curriculum designers, doctoral students, doctoral researchers, university faculty, professors, researchers, and academicians.

Finite Mathematics and Calculus with Applications Margaret L. Lial 2004 Widely known for incorporating interesting, relevant, and realistic applications, this text offers many real applications citing current data sources. There are a wide variety of opportunities for use of technology, allowing for increased visualization and a better understanding of difficult concepts. MyMathLab, a complete online course, will be available with this text. For the first time, a comprehensive series of lectures on video will be available.
